## Section 1 Summary

Figure 1: Parsons-UXB Team

### 1.1 Project Background

Kaho`olawe is the smallest of the eight main islands in the Hawaiian Archipelago, 94 miles southwest of Honolulu. Kaho`olawe is 11 miles long, 6 miles wide and contains approximately 28,800 acres. The island is of volcanic origin with the highest elevations of 1,477 feet. The slopes are fissured with gulches 50 to 200 feet deep. Approximately 30 percent of the island is barren due to severe erosion. Formidable cliffs dominate the east and south coast. Title X of Fiscal Year (FY) 1994 Department of Defense (DoD) Appropriations Act directed the United States of America, through the Secretary of the Navy, to convey Kaho`olawe to the State of Hawaii and to enter into an Memorandum of Understanding (MOU) regarding the cleanup of the island. On May 6, 1994, the Navy signed an MOU with the State of Hawaii establishing a basic framework to accomplish the Kaho`olawe Island cleanup. Title for the land was conveyed to Hawaii on May 9, 1994, but access control remained with the Navy until November 11 2003.

On November 11, 2003 access control was transferred to the State of Hawaii. The Navy and the State of Hawaii entered into an agreement to extend limited access control to the Navy to continue UXO clearance till April 9, 2004. The extension was needed to complete the quality control and assurance inspections on areas cleared up to November 11, 2003 and to demobilize government and contractor's equipment from Kaho`olawe.

## 1.2 Previous UXO Clearance Activities

Since 1981, there have been numerous clearance activities conducted on the Island. From 1981 to early 1994, the local Explosive Ordnance Disposal (EOD) units conducted surface clearances in support of the consent decree between the Navy and the Protect Kaho`olawe Ohana (Aluli v. Brown). During that time, over 10,000 acres were surface-cleared at least once. The total amount of UXO and UXO-related materials cleared during that time and during the subsequent model clearance were thought to be indicative of the potential for the upcoming cleanup activities. For example, 96,000 UXO items (1987-1993) were surface-cleared on the same areas that were previously cleared of 38,000 UXO items (1981-1987). Clearance reports indicate that the large number of items found in previously cleared areas were due predominately to erosional effects. The 1995 Kaho`olawe Island Model Unexploded Ordnance (UXO) Clearance (Model Project) results support these findings by clearing a cross section of the island and revealing the extent and variety of UXO contamination.

In May of 1941, Kaho`olawe Ranch signed a sublease for a portion of the island with the U.S. Navy for \$1.00 a year up to 1952, when the Ranch's lease expired. Seven months later, on the day following the Japanese attack on Pearl Harbor (December 8, 1941), the Territory of Hawaii was placed under martial law. The military took over the entire island, and ranching operations ended.

Ship-to-shore bombardment of the island commenced in 1941 and intensified starting on October 21, 1943, when the USS Pennsylvania conducted rehearsals for the Gilbert Islands invasion. In preparation for additional landings across the Pacific, the Navy ran ship-to-shore fire-control training operations at Kaho`olawe. From 1942-1943, American submarine commanders tested torpedoes by firing them at the shoreline cliffs at Kanapou. Additional torpedoes were test-fired from 1943 to the 1960's. The following summary (Table 1) is a brief synopsis of Kaho`olawe's UXO-related history:

**Table 1: Kaho`olawe's UXO related history**

Date	Event
1941	Kaho`olawe was subleased to the U.S. Government by the Kaho`olawe Ranch company for use as a military training area.
1953	President Eisenhower signed an Executive Order on 20 February (No. 10136, 25 February) placing the control of the Island under the Secretary of the Navy.
1965	"Sailor Hat" tests were conducted on Kaho`olawe. Three tests of 500 tons of TNT each were detonated to simulate the blast effects of nuclear weapons on shipboard weapon systems.
1969	The center third of the Island was designated as the impact area, the remainder as troop safety zones.
1976-77	The last major road and target upgrades were made.
1976	Ironwood trees (200) were planted to create a windbreak. Follow-on planting of Tamarisk pines was conducted in the 1980's. Twelve permanent signs were erected at most likely landing sites. An underwater survey was conducted by local Navy EOD unit
1977	"Puff" rounds (non-explosive ordnance with a spotting charge) were introduced.
1978	An M83 "butterfly" bomb was found behind galley at the Navy base camp. Prior to this time, there was no recorded usage of this type weapon system near base camp.

Date	Event
1980	The DoD was taken to court through the Hawaii Legal Aid Society. The resulting consent decree, <i>Aluli v. Brown</i> , set forth-specific responsibilities and deadlines to be met by the DoD, state and local agencies. Public Law 96-418 dated 10 October, section 810(a) initiated a Decontamination Study requirement for Kaho`olawe Island.
1981	The entire Island was designated as Kaho`olawe Island Archaeological District and was listed on the National Register of Historic Places. Surface clearance operations were initiated in accordance with the Consent Agreement. 1989: During road grading of K1, three AN-M30 series HE GP 100 bombs were found by the graders.
1990	Presidential memo of 22 October 1990 immediately ceased use of Kaho`olawe as a live ordnance training area.
1993	A State underwater study was completed.
1994	Title X of FY 1994 DoD Appropriations Act directed that the United States of America, through the Secretary of the Navy, convey the Island and its surrounding waters to the State of Hawaii and enter into a MOU regarding the cleanup of the Island. On 6 May 1994 the Navy signed an MOU with the State of Hawaii establishing a basic framework to accomplish Kaho`olawe Island cleanup. Title for the land was conveyed to the State on 9 May 1994, but access control remains with the Navy until UXO cleanup operations are complete or until 11 November 2003, whichever occurs first.
1994	Base Camp was surface-swept for operations turnover from military to civilian contractors.
1995-96	The Model Action Plan (MAP) UXO clearance was performed.
1997	The Omnibus UXO clearance contract awarded. A site investigation for UXO was completed.
2003	Transfer of access control from the Navy to the State of Hawaii
2004	Navy clearance completed and departs island on April 9, 2004

### 1.3 Project Authorization

This report documents the results of unexploded ordnance (UXO) clearance activities undertaken on the Kaho`olawe Island Reserve, Hawaii, under the authorization of Public Law 103-139, 107 STAT 1418, 1479-1484 (Title X). UXO clearance activities were conducted consistent with the Cleanup Plan, dated June 30, 1998 and as modified by the Explosive Safety Submission, Amendment 1 (ESS), dated November 2001.

UXO clearance was directed by Naval Facilities Engineering Command, Pacific Division (PACDIV) under contract N62742-95-1369 and per the following Statements of Work and subsequent revisions:

- Task Order 0007, Area Assessment I (PACDIV letter dated February 27, 1998)
- Task Order 0008, UXO Clearance I (PACDIV letter Ser. 0223/0170 dated June 30, 1998)
- Task Order 0015, Area Assessment II
- Task Order 0016, UXO Clearance II (PACDIV letter Ser. 0223/0336 dated March 18, 1999) and subsequent revisions.
- Task Order 0032, Area Assessment III (PACDIV letter Ser 0223/0379 dated July 7, 1999)
- Task Order 0052, Area Assessment IV (PACDIV letter Ser ACQ0231/0508 dated July 5, 2000.

- Task Order 0054, UXO Clearance III (PACDIV letter Ser. ACQ 0231/0556 dated August 28, 2000)
- Task Order 0057, Base Camp Clearance (PACDIV letter Ser ACQ 0231/0656 dated June 6, 2001)
- Task Order 0063, Area Assessment V (PACDIV letter dated September 14, 2001)

## 1.4 After Action Report Structure

The UXO clearance on Kaho`olawe was divided into individual work areas to improve the command and control of this large project. This report is the final summary of twenty Work Area-Specific After Action Reports previously submitted to the Navy. Clearance activities and processes that encompassed multiple work areas, as well as a final summary of clearance results, are presented in this report. Clearance boundary descriptions, work area specific clearance results, and recommendations are presented in the individual Work Area-Specific After Action Reports. The following table lists the Work Area-Specific After Action Reports:

**Table 2: Work Area Specific After Action Reports**

After Action Report No.	Work Area Name
1	Lua Makika
2	Kanapou
3	Kalapakea
4	Kealaikahiki
5	Hakioawa
6	Beck's Cove
7	Seagull and Honokoa Tier Two
8	Seagull II
9	Waikahalulu
10	Kamohio
11	Naval Gunfire
12	OBOD
13	Honokanaia
14	Puu Moiwi
15	Honokoa
16	North Coast
17	Kuheia
18	K-1 Road
19	Base Camp
20	Moaulanui

## 1.5 UXO Clearance Terminology

Title X required the “establishment of a two-tiered standard of restoration and ordnance clearance, removal, restoration, and safety, taking into account the purpose for which any geographic area will be used and the nature and purpose of human access to such area, but assuring the protection of human health and the environment.” The MOU developed two UXO clearance standards – Tier One and Tier Two.

The Tier One standard was defined as clearance of all UXO from the surface of the island. The MOU states that the Cleanup Plan “shall provide for the removal or clearance of all unexploded ordnance from the surface of the island in accordance with Tier One standard.”

The Tier Two standard was identified in the MOU as the “cleanup or environmental restoration to a condition which allows the reasonably safe use of the site or area” for the purposes listed in the Kaho`olawe Use Plan. The Kaho`olawe Use Plan was prepared to identify intended use and priority areas that were to be cleared to the Tier One and Tier Two standards. For the purpose of this UXO Clearance Project, Tier Two was defined as UXO clearance of the surface plus four feet below the surface.

Additional clearance terminology that was developed specifically for this clearance includes Area Assessment and Risk Reduction Clearance.

Area Assessment was a pre-clearance activity that documented the existing, cultural, environmental and natural resources of the proposed clearance area. Additionally, the level of UXO and environmental contamination were investigated during this phase. See Section 5.1 for further information.

Risk Reduction Clearances were developed late in this project to reduce the UXO risk associated with areas that were to be left uncleared. See the details of this clearance type in Section 5.4.1.

Table 3 summarizes the net clearances completed in the Kaho`olawe Island Reserve. See Table 10 for clearance calculations by clearance level and clearance work area.

**Table 3. UXO Clearance Summary – Kaho`olawe Island**

Clearance Standard	M2	Acres
Tier Two (Surface plus 4 feet)	10,707,442	2,646.92
Tier One (Surface only)	72,111,728	17,819.53
Uncleared Exception Areas	2,909,390	718.94
Uncleared Area	23,738,000	5,972.6

Data as of 30 July 2004

## Section 2 Recommended End Uses

The Quitclaim Deed<sup>1</sup> recorded that “until such time as the UNITED STATES, in accordance with provisions of the MOU, certifies in one or more documents to the STATE (of Hawaii) that ordnance clearance or removal or environmental restoration actions under Title X and the MOU have been completed, areas that are not so certified to the STATE through documents recorded in the State Bureau of Conveyance remain DANGEROUS TO THE PUBLIC AND ARE NOT SAFE.” Utilizing the Department of Defense publication DoD 6055.9 STD (Department of Defense Ammunition and Explosive Safety Standards), as well as the Navy’s Cleanup Plan<sup>2</sup> and Explosive Safety Submission, Amendment 1<sup>3</sup>, the following corresponding uses are recommended to be consistent with the levels of UXO clearance achieved in this work area.

### 2.1 Tier Two (Four-Foot Removal Depth)

Table 4 correlates the permitted DoD 6055.9-STD uses for the depth of clearance with the corresponding State of Hawaii’s Kaho`olawe Use Plan<sup>4</sup> and Cleanup Plan terminology approved in the Explosive Safety Submission.

**Table 4. Permitted Uses, Tier Two (Four-Foot Removal Depth)**

Kaho`olawe Use Plan	DoD 6055.9-STD	Cleanup Plan Allowed Use
Educational and Cultural Center	Recreation/Vehicle Parking/Surface	No intrusive activities deeper than 12 inches (Camping, Surface Recreation). No fire pits.
Nursery/Reservoir	Farming/Agriculture/Surface	Intrusive activities up to 12 inches, associated with revegetation and soil stabilization.
Revegetation/Soil Stabilization	Farming/Agriculture/Surface	Intrusive activities up to 12 inches, associated with revegetation and soil stabilization.
Trails	Recreation/Vehicle Parking/Surface	Public Access, trail maintenance activities. High erosion potential.

### 2.2 Tier One (Surface Only)

Public access to any Tier One UXO Clearance areas is only permitted with explosive ordnance disposal (EOD)/UXO escorts. DoD 6055.9-STD currently does not define a recommended end-use for surface-only clearances.

<sup>1</sup> Quitclaim Deed from the United States of America to the State of Hawaii for the Island of Kaho`olawe, Hawaii, State of Hawaii Bureau of Conveyances, Recorded May 9, 1994, Doc. No. 94-076277

<sup>3</sup> *Explosive Safety Submission, Amendment 1, UXO Clearance Project, Kaho`olawe Island Reserve*, Prepared by Parsons-UXB Joint Venture for Pacific Division, Naval Facility Command, 2001

<sup>4</sup> *Palapala Ho`onohono Moku`āina o Kaho`olawe, Kaho`olawe Use Plan*, Prepared by PBR Hawaii for the Kaho`olawe Island Reserve Commission, Honolulu, Hawaii, 1995

Table 5 correlates the corresponding Kaho`olawe Use Plan and Cleanup Plan terminology approved in the Explosive Safety Submission.

**Table 5. Permitted Use, Tier One (Surface Only)**

<b>Kaho`olawe Use Plan</b>	<b>DoD 6055.9-STD</b>	<b>Cleanup Plan Allowed Use</b>
Botanical/Wildlife Preserve	Undefined	Limited access mound planting with EOD/UXO escort, low intensity, no intrusive activities.

## 2.3 Uncleared Areas

Uncleared exception areas remain hazardous, and no land use is recommended. Restricted access with EOD/UXO escorts only and no intrusive activities are recommended.

## Section 3 Removal Action Summary

### 3.1 UXO/OE Removal Summary

Table 6 summarizes unexploded ordnance/ordnance and explosives (UXO/OE) items removed from the Kaho`olawe Island Reserve by type and clearance activity. Suspected UXO/OE items were field classified by the Surface Sweep Teams into ten general categories. These items were marked and left for a specialized Identification and Assessment Team to identify more precisely. Each UXO/OE item was assigned a unique barcode number and was either transported to the Open Storage Area (OSA) for later disposal or was detonated in place (blown-in-place (BIP)). The following identifies the clearance areas indicated:

- Surface: UXO/OE items recovered from the surface of the clearance area.
- Subsurface: UXO/OE items recovered during subsurface UXO clearance.
- Risk Reduction: surface UXO-only clearance sweeps, see Section 5.4.1 for further details on the Risk Reduction Process.
- Shoreline: UXO clearances either surface or subsurface done outside of the clearance boundaries along the coastal shoreline, see Section 5.4.2 for further details on Shoreline Clearances.

**Table 6. UXO Summary by Type – Kaho`olawe Island**

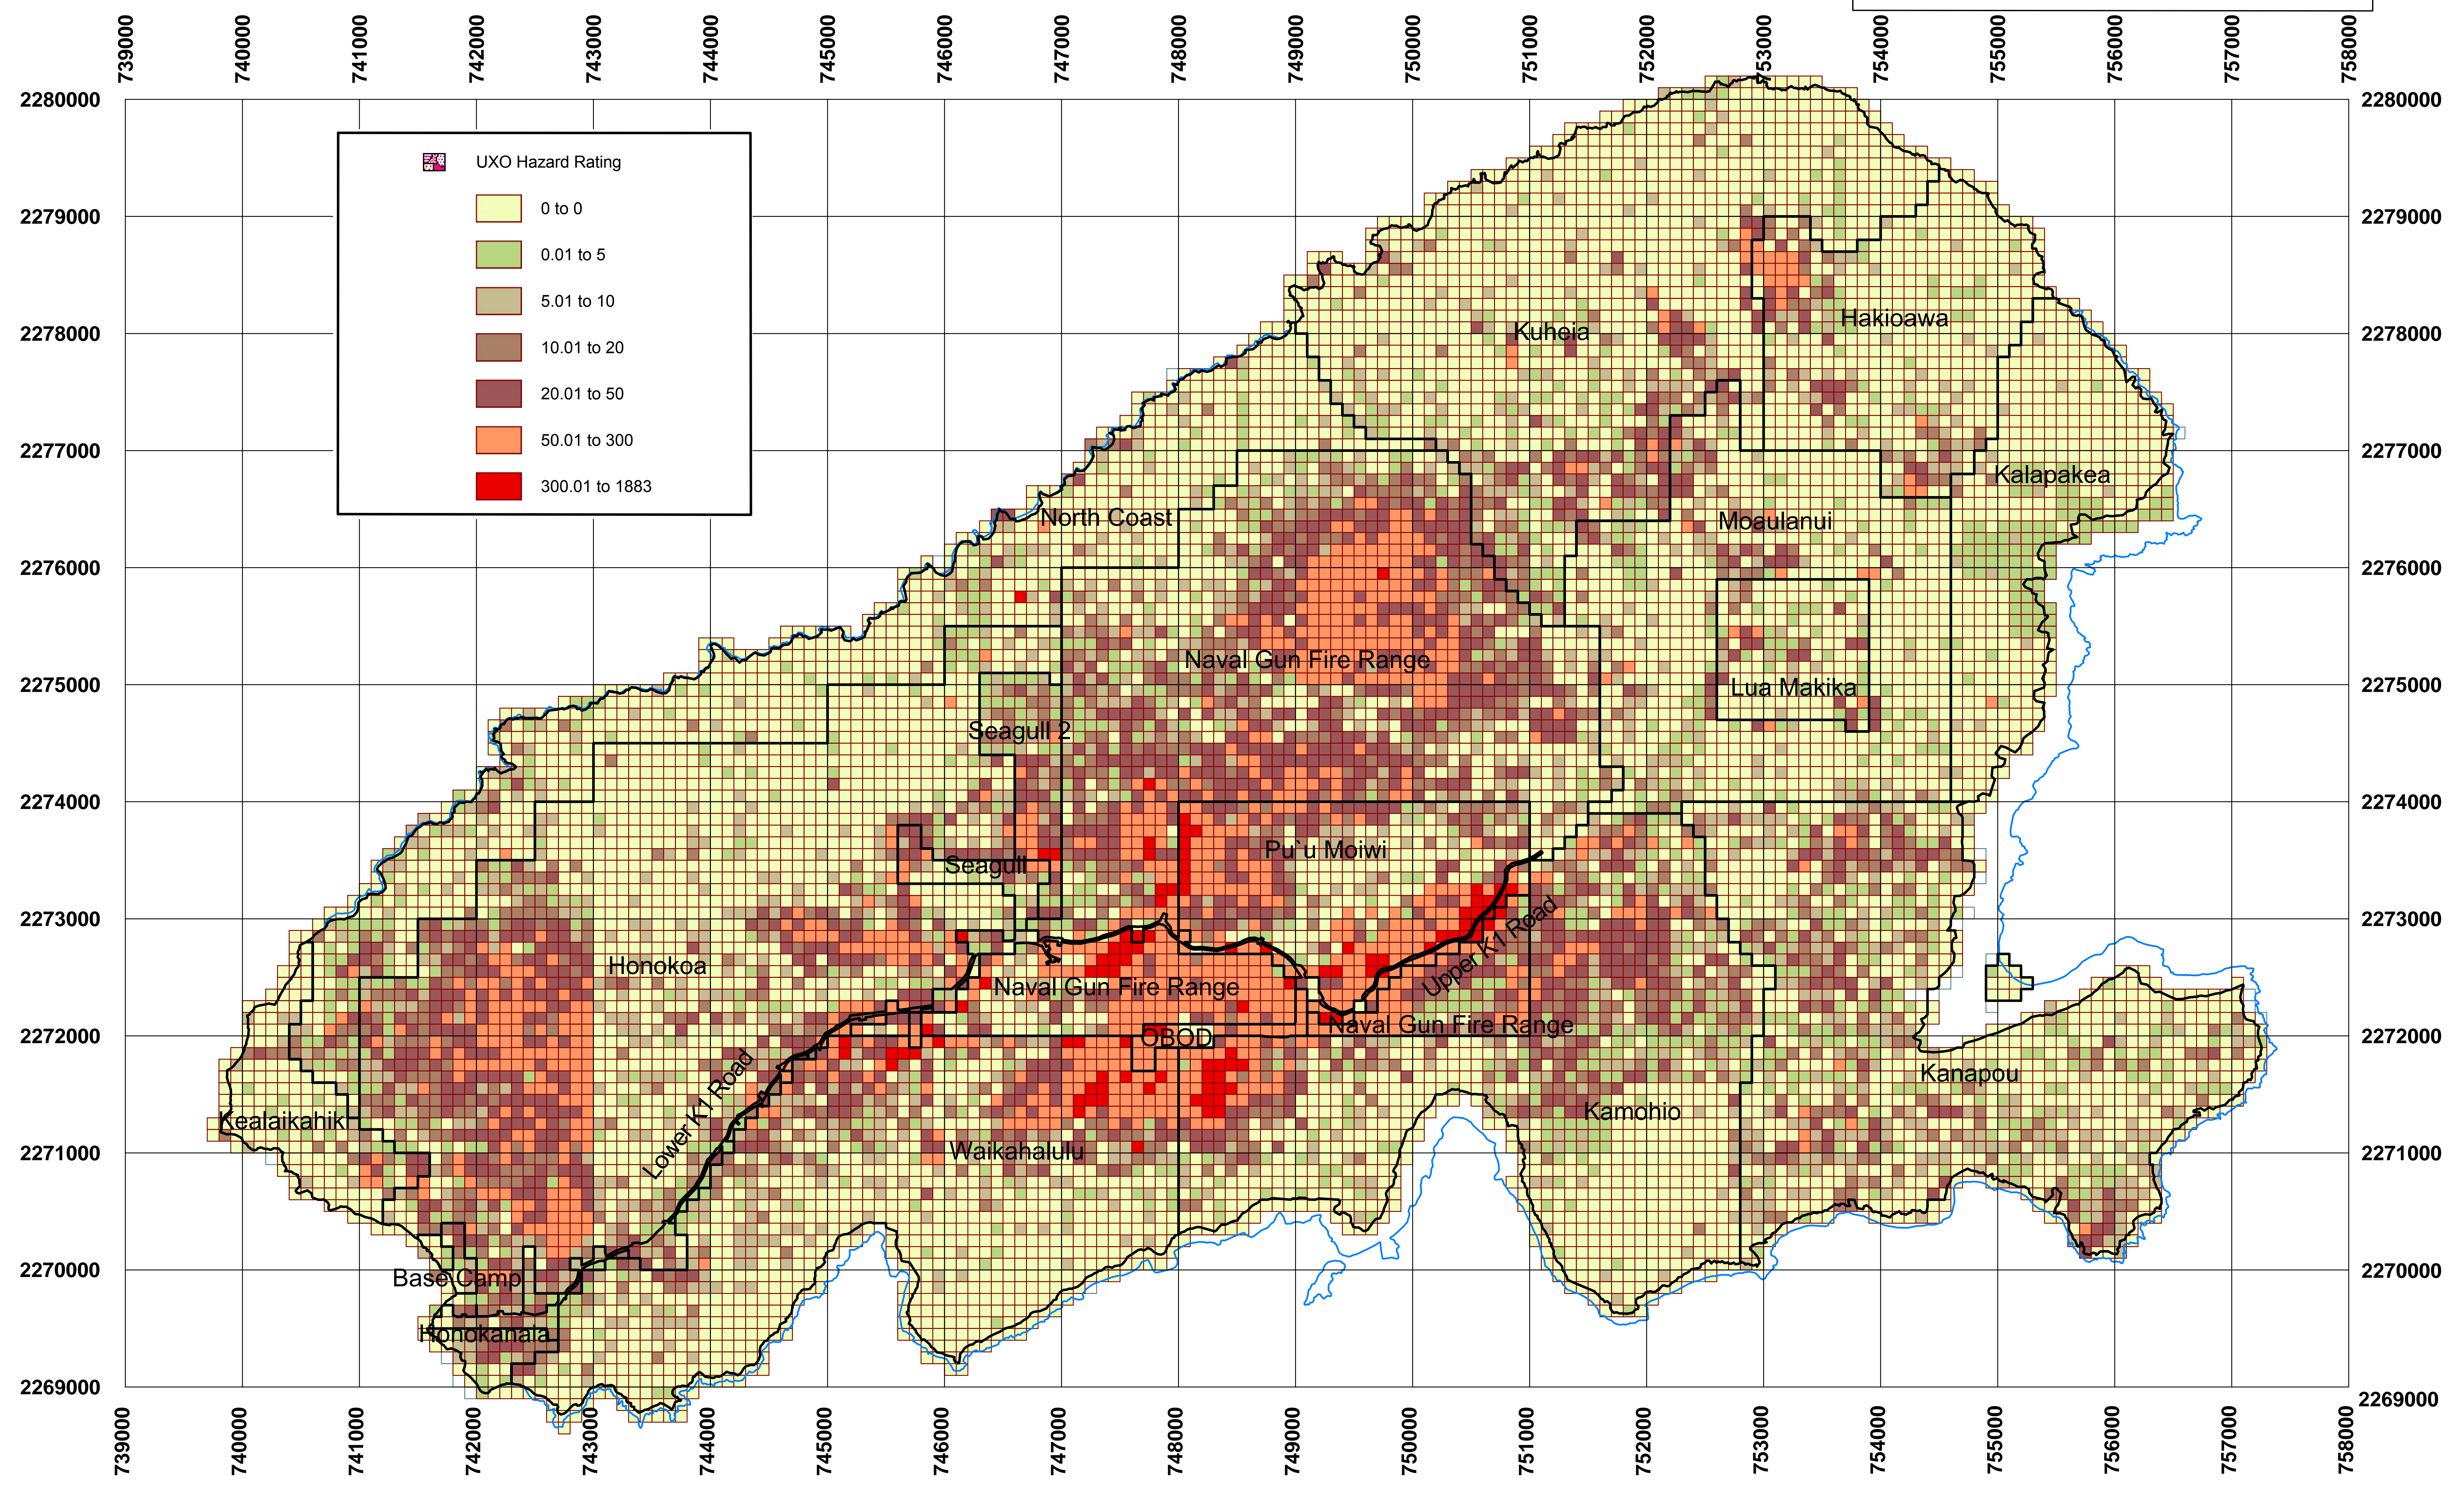

UXO Types	Surface	Subsurface	RR Area	Shoreline	Subtotal
20mm Projectiles	3,676	65	147	16	3,904
Bomb	1,944	504	319	6	2,773
Grenade	26	4	--	--	30
Guided Missile	8	--	1	--	9
Mortar	727	53	55	1	836
OE Component	4,114	108	491	7	4,720
Projectile	8,996	363	1,296	16	10,671
Propellant	927	16	35	--	978
Pyrotechnic	687	12	42	2	743
Raw Explosive	470	17	10	--	497
Rocket	1,248	266	81	2	1,597
Small Arms	1,772	18	61	7	1,858
Sub Munitions	5	--	--	--	5
<b>Total</b>	<b>24,600</b>	<b>1,426</b>	<b>2,538</b>	<b>57</b>	<b>28,621</b>

Figure 4 plots a relative UXO Hazard level based upon a weighted-distribution of UXO items found. More hazardous UXO items were given a higher weighting factor than less hazardous items. The UXO distribution patterns indicate the more heavily used training areas.

**Figure 4: UXO Hazard Assessment**

Produced by: ParsonsUXB Joint Venture  
 Produced for: Department of the Navy  
 Data as of 30 July 2004

**Multipliers:**  
 Bomb = 10    Pyrotechnic = 4  
 Grenade = 10    Rocket = 5  
 Missile = 5    Small = .2  
 Mortar = 5    Submunition = 10  
 Projectile = 7    Total OE = .1

## 3.2 UXO Disposal Summary

After specialized Identification and Assessment Team determine a suspected UXO item still possessed an explosive charge, the UXO item was then determined either Safe-to-Move or required to be destroyed in place. Items moved to the Open Storage Area (OSA) were later destroyed either through open burning or open detonation at the Open Burn/Open Detonation (OBOD) site. Each destroyed UXO item was issued a certificate of destruction that consisted of a signature by the Demolition Manager on the UXO item's record form.

**Figure 5: Blow-in-Place Operations**

### 3.2.1 Blow-in-Place Operations

UXO items determined to be unsafe to move were disposed of in place by the blow-in-place (BIP) procedures. BIP operations consist of using explosive charges to detonate any remaining explosive materials left in the UXO item. Initially BIP operations were conducted using electric detonators in conjunction with a blasting machine that provided positive firing control. These procedures were effective, but time consuming due to the need to lay out long-firing wires across the fragmentation zone of the UXO item to a safe standoff area. Additionally, NAVSEA OP 5, Volume 1, *Ammunition and Explosives Ashore: Safety Regulations for Handling, Storing, Production, Renovation and Shipping* was modified in Revision 7 that further increased the calculated fragmentation distances from those previously used. Eventually, electric procedures were replaced by non-electric detonators due to their efficiency and ease of use; however, this compromised firing control, so BIP operations were typically scheduled for Fridays when the majority of the workforce was not present.

Table 7 summarizes the explosives used for BIP, open detonation, and explosive demilitarization operations.

**Table 7: Demolition Explosives Summary**

<b>Materials Used</b>	<b>Quantities Used</b>
Detonator Electric Number 8 Manufactured by Dupont	1,145 units
Non Electric Detonators , Fuse Caps, Manufactured by Orica	2,500 units
Safety Fuse, Manufactured by Tec Harseim	91,360 units
Lighters, Fuse, Manufactured by Martin and Shaft	2,800 units
Cord, Detonating 80 grains per ft, Manufactured by Detotec North America Inc	93,000 feet
Cast Booster (1 LB units), Manufactured by Ensign Bickford	5,880 units
Shaped Charge Jet Perforator 36 Gram, Manufactured by Haliburton Energy Services	12,160 units
Cast Booster 90 Gram, Manufactured by Ensign Bickford	3,360 units
APEX Slurry 1.5 Explosives, Manufactured by Orica USA Inc	1,262 lbs
Flexible Linear Shaped Charges	4,998 feet

### 3.2.2 Safe-to-Move Operations

UXO items determined safe-to-move were initially transported to the OSA for later destruction. Later in the project, many of these UXO items were consolidated in the field with other planned BIP items and destroyed in the field. In the later phases of the clearance, the work areas were located further from the main access routes and made ground transport of UXO much more hazardous. Some of these UXO items were normally classified as safe-to-move, and were regularly moved along the graded roadways. A procedure was developed to transport UXO by commercial helicopter, but never implemented at the direction the Navy. As transportation of many of these UXO items by hand over rough terrain was considerably more dangerous than the immediate disposal of these items, efforts were made to consolidate the more hazardous items with existing BIPs for in-field destruction.

### 3.2.3 Open Detonation Operations

The Open Detonation area was described and cited in the ESS as consisting of two demolition pits. This was a reduction from the previous Phase II Site Safety Submission of six pits. The Phase III Site Safety Submission approved an explosive limit for the combined pits of 1,000 pounds net explosive weight (NEW) of Class/Division (C/D) 1.1 explosives, or 1,500 pounds when used for open burn. The Department of Defense Explosive Safety Board (DDESB) also recommended that a 5,115-foot evacuation distance be used for all detonation operations at this site.

The 5,115-foot evacuation distance prevented the concurrent operation of the OBOD and the TPU. To allow concurrent open detonations and thermal treatment operations, a second smaller Open Detonation Area (OD Area 2) site was established in the Phase IV Site Safety Submission. The OD Area 2 site was approved for 600 pounds NEW of C/D 1.1 explosives or

UXO items of 5.0 inches in diameter or less. The mandatory evacuation distance for the OD Area 2 was 2,772 feet based upon the approved explosive limit. The interline distance between OD Area 2 and the TPU was 3,477 feet, placing the TPU outside the mandatory evacuation distance of OD Area 2.

### **3.2.4 Open Burn Operations**

The Open Burn area was described and cited in the ESS as consisting of two interlocking dirt pads with the capacity for 12 burn pans, a primer pit and two incendiary cages. Establishing an elaborate open burn area was determined to be unnecessary with the introduction of the Thermal Processing Unit (TPU). Materials requiring thermal treatment were processed in the TPU, Section 3.3.1.1. Those items that could not be treated within the TPU were burned within a modified 2.5-ton steel truck bed that consisted of two nested 2.5-ton truck beds with sand used in between the metal pans to absorb fuel leakage.

## **3.3 Material Management Summary**

In addition to the UXO/OE removal actions completed, ordnance scrap and other materials were also removed during the UXO clearance process. These materials are classified in the Explosive Safety Submission categories as described below.

### **3.3.1 UXO Remnants**

This category includes all exploded UXO remains recovered during surface and subsurface clearance operations. UXO remnants were sorted into four subcategories:

- a. Metals requiring thermal treatment
- b. Metals requiring demilitarization
- c. Metals not requiring thermal treatment or demilitarization
- d. Non-hazardous candle mix not requiring thermal treatment

UXO remnants were collected during the clearance process, removed from the field, and taken to the Inspection Point for segregation. All collected UXO remnants were visually inspected at the Inspection Point to ensure that no live UXO/OE entered the UXO-remnant waste streams. A listing of UXO remnant material collected in the field by GMU is found in Supplement D. Figure 9 shows the distribution of UXO remnants across the UXO clearance areas.

#### **3.3.1.1 Thermal Treatment**

UXO remnants requiring thermal treatment were sent to the on-island Thermal Processing Unit (TPU) for thermal treatment. The TPU was a self-contained, transportable “car-bottom” furnace built by El Dorado Engineering. The TPU was designed to handle total loads containing non-combustible, explosive-contaminated (3X) metals of up to 10,000 pounds. The TPU burned the combustible constituents of the residual energetic that remained in and on any UXO remnant. Thermal treatment is the process of rendering explosive contaminated (3X) metals explosive free (5X). The 5X classification signifies that an item is clean of any residual explosives and may be released from Government control without precautions or restrictions. This was described and approved in the ESS as “raising the temperature of the metal to 1000°F.” All UXO remnants and target materials collected were planned to be subjected to the thermal treatment process. Thermally treated materials were then shipped off-island to a scrap metal vendor for recycling.

**Figure 6: Thermal Processing Unit (TPU)**

Upon initial operation of the TPU, it was discovered that an operating temperature of 1000°F was not sufficient to ensure that all portions of the UXO remnant pile reach the required temperature. Also, evidence that part of the load was not getting hot enough was found. Unburned plastic insulation, unburned wood chips and pieces of unmelted lead were observed in treated material that was being prepared for shipment. A series of test were conducted to modify the thermal treatment process. In the first study, completed in September 2002, a series of temperature measurements using thermocouples were evaluated. As a result of the temperature profiles developed during this testing, some process changes were made including changes in the distribution of materials within the furnace in order to achieve the required 1000°F throughout the UXO remnant pile. This was only achieved through increasing the operating temperature and time at temperature to insure the entire UXO remnant pile achieved the required temperature. The result was an increased cycle time as the UXO remnant pile heated up and cooled down, which reduced productivity and caused excessive wear and tear on the furnace and processing trays. The second study, conducted in November 2002, utilized test sample coupons that were contaminated with explosive residue. The levels of explosive contamination were measured prior to and after thermal treatment at varying temperatures and time duration. Based upon the results of the second study a Site Safety Submission was submitted to NOSSA requesting concurrence on a reduction of the required firing temperature to a thermocouple reading of 650°F measured mid-pile and held for ten minutes would reflect that the entire thermal mass of metal had been sufficiently heated to destroy any explosive residues for the purpose of 5X certification (NOSSA letter 8020 Ser N711/2138 of May 14, 2002). These

improvements reduced cycle time and increased productivity as well as reduce the wear and tear on the furnaces.

### 3.3.1.2 Demilitarization

UXO remnants requiring demilitarization were separated from the UXO remnant waste stream into segregated storage for demilitarization. Demilitarization was the process of manually or explosively deforming an item so that it cannot once again be retrofitted into ordnance per Defense Reutilization and Marketing Service (DRMS) Manual 4160.21-M (March 1990).

A Caterpillar 235 excavator with a 1990 Labounty UP90 hydraulic shear attachment was initially used for demilitarization of larger inert munitions and to help demolish larger target vehicles.

It was quickly determined that the quantities and types of materials that needed demilitarization would exceed the capacity of the hydraulic shear. To handle the additional demilitarization, the UXB Lightweight Ordnance and Armament Demilitarization System (LOADS) was mobilized to Kaho`olawe in December 2003. LOADS is specifically designed to demilitarize training range residue, including practice bombs and projectiles up to 155mm. LOADS operated by applying extreme impact force using a hydraulic press, which impacts the material causing dramatic disruption of the structural integrity.

**Figure 7: Lightweight Ordnance and Armament Demilitarization System (LOADS)**

### 3.3.1.3 Visual 5X

UXO remnants not requiring thermal treatment or demilitarization were separated from the UXO remnant waste stream following Parsons-UXB Standard Operating Procedure (SOP) A23-k.2, Explosive Inspection Point Operations, "Criteria and General Guidelines for Visually 5Xing Range Residue" and were placed into segregated storage and shipped off-island. This process was developed based upon the Army Publication IOCP-385-1 of July 16, 1997 and NOSSA Message DTG 171301Z DEC 02, Subject: Explosive Mishaps Involving Munitions Residue.

The 5X process ensured prior to release from DoD control, a determination was made that each munition residue was inert and did not pose an explosive safety hazard. This was accomplished by first sorting all UXO-remnants and verifying no UXO entered the UXO-remnant waste stream. UXO-remnants are then visually inspected to verify that no surface explosives are visible. If any voids or crevices are present that prevents a complete visual inspection, then the UXO-remnant is separated for thermal treatment.

### 3.3.2 Non-Hazardous Candle Mix

Non-hazardous candle mix not requiring thermal treatment was previously identified as pyrotechnic filler that was originally proposed to be destroyed through open burning. Candle mix was determined to be non-hazardous by collecting and analyzing several samples for explosives and propellants, semi-volatile organic compounds and toxic metals. Based upon the chemical test results, the material proved to be non-hazardous. This material was collected and disposed through landfilling.

**Figure 8: Non-UXO Materials (Tires) Awaiting Off-Island Shipment**

### 3.3.3 Other Materials (Non-UXO)

Materials that are not UXO-related include tires, petroleum, POL- (petroleum, oils, and lubricants) contaminated soil, non-POL-contaminated soil, and material from waste (dump) sites. These materials were separated into metals, tires, and non-metals (range trash) and were shipped off-island for disposal. A listing of non-UXO-related remnant material's weights by GMU can be found in Supplement E. All weights are field estimates.

Not included in this category were environmental hazardous wastes that were separated from the Non-UXO waste stream prior to collection in the field. In addition to some of the items listed above, additional hazardous waste included POL contaminated soils, lead-acid batteries, heavy-metals contaminated soils and Low Level Radioactive Waste (LLRW). LLRW was found in the radium instrument dials installed in some of the older military vehicles. Results of hazardous waste discovery and removal are included in the applicable work area Environmental Conditions Reports and testing memorandums submitted separately to the Navy.

Table 8 summarizes the materials collected during the UXO clearance on Kaho`olawe Island.

**Table 8. Material Management Summary – Kaho`olawe Island**

Material Type	Surface (lb)	Subsurface (lb)	BIP Generated (lb)	Total (lb)
<b>UXO Remnants</b>				
Metals Requiring Thermal Treatment	4,204,130	353,129	21,937	<b>4,579,196</b>
Metals Requiring Demilitarization	2,207,261	490,130	112,302	<b>2,809,693</b>
Metals Not Requiring Thermal Treatment or Demilitarization	2,425,966	111,778	14,266	<b>2,552,010</b>
Non-Hazardous Candle Mix	11,393	22	35	<b>11,450</b>
<b>Other Materials (Non-UXO)</b>	2,880,883	550,628	--	<b>3,431,511</b>
<b>Totals</b>	<b>11,729,633</b>	<b>1,505,687</b>	<b>148,540</b>	<b>13,383,860</b>

### 3.3.4 Target Materials

Target materials include those items used as a military target (i.e., tires, vehicles, wood, and empty drums). All targets that were inspected and found to be UXO-free were transported to on-island storage and later shipped off-island. Target materials found not to be UXO-free were treated as UXO. Not all weights were recorded in the field and are therefore not summarized in this report.

## Section 4 Quality Assurance/Control Summary

---

### 4.1 QA/QC Program Overview

The Quality Assurance/Quality Control (QA/QC) program used consisted of both contractor and Government QA/QC programs. The contractor's quality program conformed to and was administered in accordance with American National Standards Institute/American Society for Quality Control (ANSI/ASQC) E4-1994, Specifications and Guidelines for Quality Systems for Environmental Data Collection and Environmental Technology Programs. Additionally, on December 14, 2003, the contractor's quality program was found by an independent auditor to meet the requirements for ISO 9001 certification. ISO 9001 is a series of international standards for quality management systems created by the International Standards Organization (ISO) based in Geneva, Switzerland. ISO 9001 establishes the organizational structure and processes for assuring that a company's services meet a consistent and high level of quality.

### 4.2 Contractor UXO Clearance Effectiveness

UXO clearance requirements were specified in the Explosive Safety Submission. These requirements were based upon actual UXO penetration depths experienced on Kaho`olawe and developed from the Kaho`olawe Site Characterization Report (NAVEODTD 1998). Minimum UXO detection statistics required for UXO clearance are an 85% probability of detection with a 90% confidence level. This minimum detection criterion was achieved and maintained through a rigorous Quality Control process described below.

#### 4.2.1 Contractor Detector Validation

To certify that the Geonics EM61 Metal Detector and its operators meet the required probability of detection criteria at the minimum confidence level, Parsons-UXB Joint Venture (PUXB) developed a certification grid consistent with the geology and topography of the clearance area. This certification grid contained a statistically significant number of buried target items to provide calculation for a meaningful confidence interval for the detection capability and reliable statistical support for clearance certification. For further details of the detector validation program see the Explosive Safety Submission (November 2001) Section 6.b.(2).

Visual and/or detector-aided surface sweeps were conducted to accomplish the Tier One UXO Clearance. Each member of the surface sweep team was required to demonstrate proficiency with the White XLT Spectrum, All Metal Detector by successfully passing a Quality Control Surface Test Grid as described in the Explosive Safety Submission. For further details of the detector validation program see the Explosive Safety Submission (November 2001) Section 6.b.(2).

All detector operators were required to successfully pass the certification grid test with each detector type prior to actual field operations. Certification records were maintained on each detector operator.

#### 4.2.2 Contractor Process Control

The contractor quality program ensures process control through quality audits and surveillance. All UXO and explosive operations were documented through the use of Standard Operating Procedures (SOPs). UXO Quality Specialists periodically conducted surveillance of all UXO and explosive operations to verify compliance with applicable SOPs and safety procedures. Deviations from the documented procedures were handled through a critical fault analysis

process that determined root cause and applies appropriate corrective action or process modification as necessary.

The Government provided independent quality surveillance of UXO procedures and explosive safety operations, as well as surveillance of the contractor's quality programs.

#### **4.2.3 Contractor Acceptance Sampling Inspection**

Contractor quality acceptance of the UXO clearance process was through acceptance sampling inspections. The contractor utilized the attributes sampling plans of Department of Defense Test Method Standard MIL-STD-1916. MIL-STD-1916 provides DoD-approved sampling plans for quality acceptance inspections.

An appropriate sampling plan was selected that resulted in an average outgoing quality curve that supported the desired detector probability. Satisfactory completion of the acceptance sampling inspection confirmed that the probability of detection established during the detector validation was maintained throughout the clearance process to the final quality inspection.

Contractor Quality Control acceptance sampling was performed in accordance with the processes described in the Explosive Safety Submission (November 2001). All areas cleared were accepted as satisfactory. A summary of the Quality Control inspections performed by the contractor is found in Supplement F.

#### **4.2.4 Contractor Data Validation**

Validation of the UXO clearance data was accomplished through a series of quality checks built into the documentation process, as well as periodic data validation samples that ensured the integrity and completeness of the clearance data.

### **4.3 Government Quality Assurance Program**

The government provided independent quality oversight. The result of their Quality Assurance program is found in the Navy Quality Assurance Supplement of this document.

## Section 5 Clearance Action Summary

### 5.1 Area Assessment Summary

Before UXO clearance was conducted in a Grid Map Unit (GMU), a thorough investigation of the GMU's natural and cultural resources were documented, as well as any environmental concerns. The Area Assessment was a multi-disciplinary approach to assess the actual field conditions in relation to UXO, historic properties, environmental, and natural resources. The findings generated by the Area Assessment Team were utilized by each of the functional managers to develop mitigation plans and procedures to protect any valuable resources found in the field.

The UXO data collected include a visual assessment of numbers and types of UXO encountered on Area Assessment transects, estimates of range debris and targets, and evidence of subsurface UXO (craters and cratering).

**Table 9: Reports Generated from the Area Assessment**

Functional Area	Reports Generated	Description
Environmental	Environmental Conditions Report	Summaries of the environmental conditions as well as the natural resources found in the work areas. Individual work area reports and a final summary report generated.
Historic Preservation	Assessment Task Order Reports	Area Assessment Task Orders 7, 15, 32, 52, and 63 Final Reports. K-1 Road Section E, Kuheia Ranch Historic Preservation Reports. These reports summarize the findings relating to archaeological and historic sites found in the work areas. Task Order Reports and a Final Summary submitted.

### 5.2 UXO Clearance Actions Completed

Consistent with the Explosive Safety Submission, Amendment 1 and the Navy's Cleanup Plan, UXO clearance was completed on Kaho`olawe Island, Hawaii, in multiple work areas according to the scopes of work for each task order authorized by the Navy.

Pursuant to the Memorandum of Understanding (MOU) <sup>5</sup> and Title X<sup>6</sup>, a review of the State of Hawaii's desired land use was conducted to determine the appropriate UXO clearance standard to be implemented in this work area. Consistent with the Kaho`olawe Use Plan, a Tier Two UXO Clearance to a depth of four feet was determined to be appropriate for portions of the work area while the remaining accessible portions should be cleared to the Tier One UXO Clearance standard.

<sup>5</sup> Memorandum of Understanding Between the United States Department of the Navy and the State of Hawaii Concerning the Island of Kaho`olawe, Hawaii, May 6, 1994

<sup>6</sup> FY 94 Defense Appropriation Act, PL 103-109, 107 STAT 1418, 1479-1484, Signed November 11, 1993

### **5.2.1 Area Preparation**

Area Preparation was the process of selective pruning or complete removal of vegetation to allow the other clearance phases to proceed. The amount of vegetation that required removal depended upon the type of UXO clearance that was scheduled for each particular GMU, as well as natural resource recommendations based on types of plants and plant communities. Vegetation removal was done by hand, by mechanical means using chainsaws or by controlled burns. More vegetation was removed from Tier Two UXO-cleared GMUs than Tier One UXO-cleared GMUs. This increase in vegetation removal was necessary due to the larger detectors used during the subsurface clearance process and more stringent clearance process. Figure 10 illustrates the vegetation density across the island as determined during the Area Assessment.

### **5.2.2 Tier One UXO Clearance (Surface Only) Operations**

Tier One UXO Clearance (surface only) consisted of visual and/or detector-aided, surface UXO clearance sweeps, in accordance with the Explosive Safety Submission. This process was accomplished by a UXO Surface Sweep Team that consisted of one UXO Specialist Supervisor and multiple UXO Sweep Personnel or a Range Clearance Team that consisted of one UXO Specialist Supervisor, one UXO Specialist, and multiple UXO Support Personnel.

All UXO found during the UXO Surface Sweep was flagged for later identification and removal. All metal and trash larger than 1 inch by 2 inches were collected, bagged and staged for removal. A summary of the material collected during the surface sweep can be found in Section 3.

### **5.2.3 Tier Two UXO Clearance (Four Feet) Operations**

Tier Two UXO Clearance (Four Feet) was accomplished in selected areas by performing a subsurface UXO clearance plus removal of ammunition and explosives, which was based upon a geophysical detector survey to a depth of four feet, in accordance with the Explosive Safety Submission, with the exception of those inaccessible parcels identified in the UXO Clearance Maps. A summary of the material collected during the surface and subsurface sweeps can be found in Section 3.

Both the Geonics Time Domain Electromagnetic Induction Magnetometer (TDEM) EM-61 and the Geophysical Technology Limited (GTL) TM-5emu were used to complete the subsurface UXO clearances. The usage of these detectors is summarized in Supplement G.

Subsurface clearance operations consisted of a geophysical detection to locate possible subsurface UXO and an UXO excavation to uncover and evaluate these anomalies.

#### **5.2.3.1 Geophysical Detection**

The detection of subsurface ordnance on Kaho`olawe was complicated by the high (and varying) concentrations of iron in Kaho`olawe's basaltic rock and soil. Traditional magnetometer metal detectors had to be discarded in favor of electromagnetic detectors (EM). EM detectors locate ordnance by reading the magnetic field generated by electrical currents passing through buried metals.

Initially, the subsurface detection used the Geonics EM-61 exclusively. Detection work was conducted in the "Mag and Flag" mode, where Geophysical Detection Teams physically flagged anomalies on the ground as they were located. Quality Control inspections were conducted in a digital data collection mode, where the EM-61 readings were recorded digitally. The digital data was then analyzed using computer software to manually locate potential anomalies. These anomalies were then investigated in the field to ensure that ordnance items were not overlooked. The initial quality control data was collected without the use of GPS data.

The wheeled EM-61, while outstanding in flat and moderate terrain, was not suitable for detection work in the rougher areas that cover much of Kaho'olawe. For these areas, the GTL TM-5e was utilized. The TM-5e is a hand-held, EM detector and has the ability to detect ordnance over terrain that is not accessible with the larger EM-61. Quality Control inspections were conducted using the same type of equipment used during the original clearance.

The geophysical detection process used during UXO clearance was changed in CY2000 to a modified digital data collection mode. This mode improved on earlier digital collections by incorporating a GPS receivers in the data collection. GPS locations were now simultaneously recorded with every EM-61 reading to allow location of geophysical anomalies to within ten centimeters. The high variance in soil conductivity on the island still made automatic selection of anomalies by the computer software impossible. All anomalies were identified manually using the Geosoft Oasis Montaj software and then relocated with GPS surveying equipment for the excavation teams.

At this time, digital data collection became the preferred method of ordnance location, wherever possible. Factors limiting the use of digital data collection were terrain and tree cover. Rough terrain made it difficult to maintain the EM-61 sensor even with the ground and tree cover interfered with GPS satellite reception. A permanent record of ground clearance could now be maintained, and data could be reviewed at a later date to improve collection and processing techniques. GPS-enabled digital data collection also became the standard for Quality Control inspections. In areas unsuitable for digital data collection, the EM-61 was used in the "Mag and Flag" mode. This option was used when tree cover or uneven terrain would cause a high level of false-positives in the data. The TM-5emu continued to be utilized in gullies and other extremely difficult terrain.

For a few selected areas on the island, a towed array, consisting of three, synched EM-61 detectors behind a vehicle were used to accelerate geophysical detection operations. The process required modification to the detector's hardware and software to prevent the multiple-detector array from interfering with each other. This process allowed large areas to be covered quickly, but it was only suitable for use on flat, open areas such as roads and parking areas. The data was then processed and the anomalies were relocated similarly to other digitally collected areas.

As a process for the future clearance operations, Parsons-UXB evaluated the move toward a paperless system, using Personal Data Assistants (PDA) to record field notes, identify anomalies, and map areas cleared. Test trials were conducted using various PDAs on Kaho'olawe, but the lack of user-friendly software made the process cumbersome and inefficient.

### **5.2.3.2 UXO Excavation**

UXO excavation operations were conducted to investigate and identify subsurface target anomalies. The excavation process initially used manual excavation of anomalies to one-foot and mechanical excavation to a depth of four-feet. Mechanical excavation operations were originally planned with Bobcat mini-excavators. This small, airlift capable excavator proved useful in the softer soils, but was unable to penetrate the hard surface of the hardpan areas. Larger tracked excavations such as a Caterpillar 235 excavators were sufficient to dig in the hard pan, but were limited in maneuverability. Most of the mechanical excavations were eventually done using Case 426C Backhoes. These backhoes outfitted with foam filled tires, to prevent tire punctures from the large-thorn kiawe brush common on the island, proved to be the right combination of strength and maneuverability.

The size of the excavation team also increased during the project as the Navy allowed a greater span of control for excavation team leaders. The initial excavation teams consisted of a UXO

Specialist Supervisor as team leader and two sub-units consisting of a UXO Specialist and a UXO Support Worker as a dig team. This expanded to a larger excavation team as three dig teams were allowed under a team leader and the dig team expanded to include two UXO Support Workers. UXO Support Workers were non-EOD trained personnel, but received on-site and in-house UXO training to support the excavation process. The increased use of UXO Support Workers represented the best cost effective method to conducted UXO excavations. Traditional UXO excavation at other locations usually use an all EDO-trained dig team and therefore a higher cost.

Originally, an Em-61 unit was assigned to each excavation team to be used by the excavation personnel. It was later proved to be more effective and efficient to assign a dedicated geophysical detector operator to assist in relocation of the UXO anomalies and to verify the anomaly removed. The experienced geophysical operator with familiarity of the local soil conditions greatly added the excavation team in false positive and geophysical anomaly determinations.

Results of the excavation process were recorded in dig sheets for each GMU (Forms RCF-7 and RCF-8). Copies of these forms are not presented in this After Action Report due to the size of data collected on these forms. The data from these forms were entered into the project Data Management System and will be available electronically once the system is operational with the State of Hawaii.

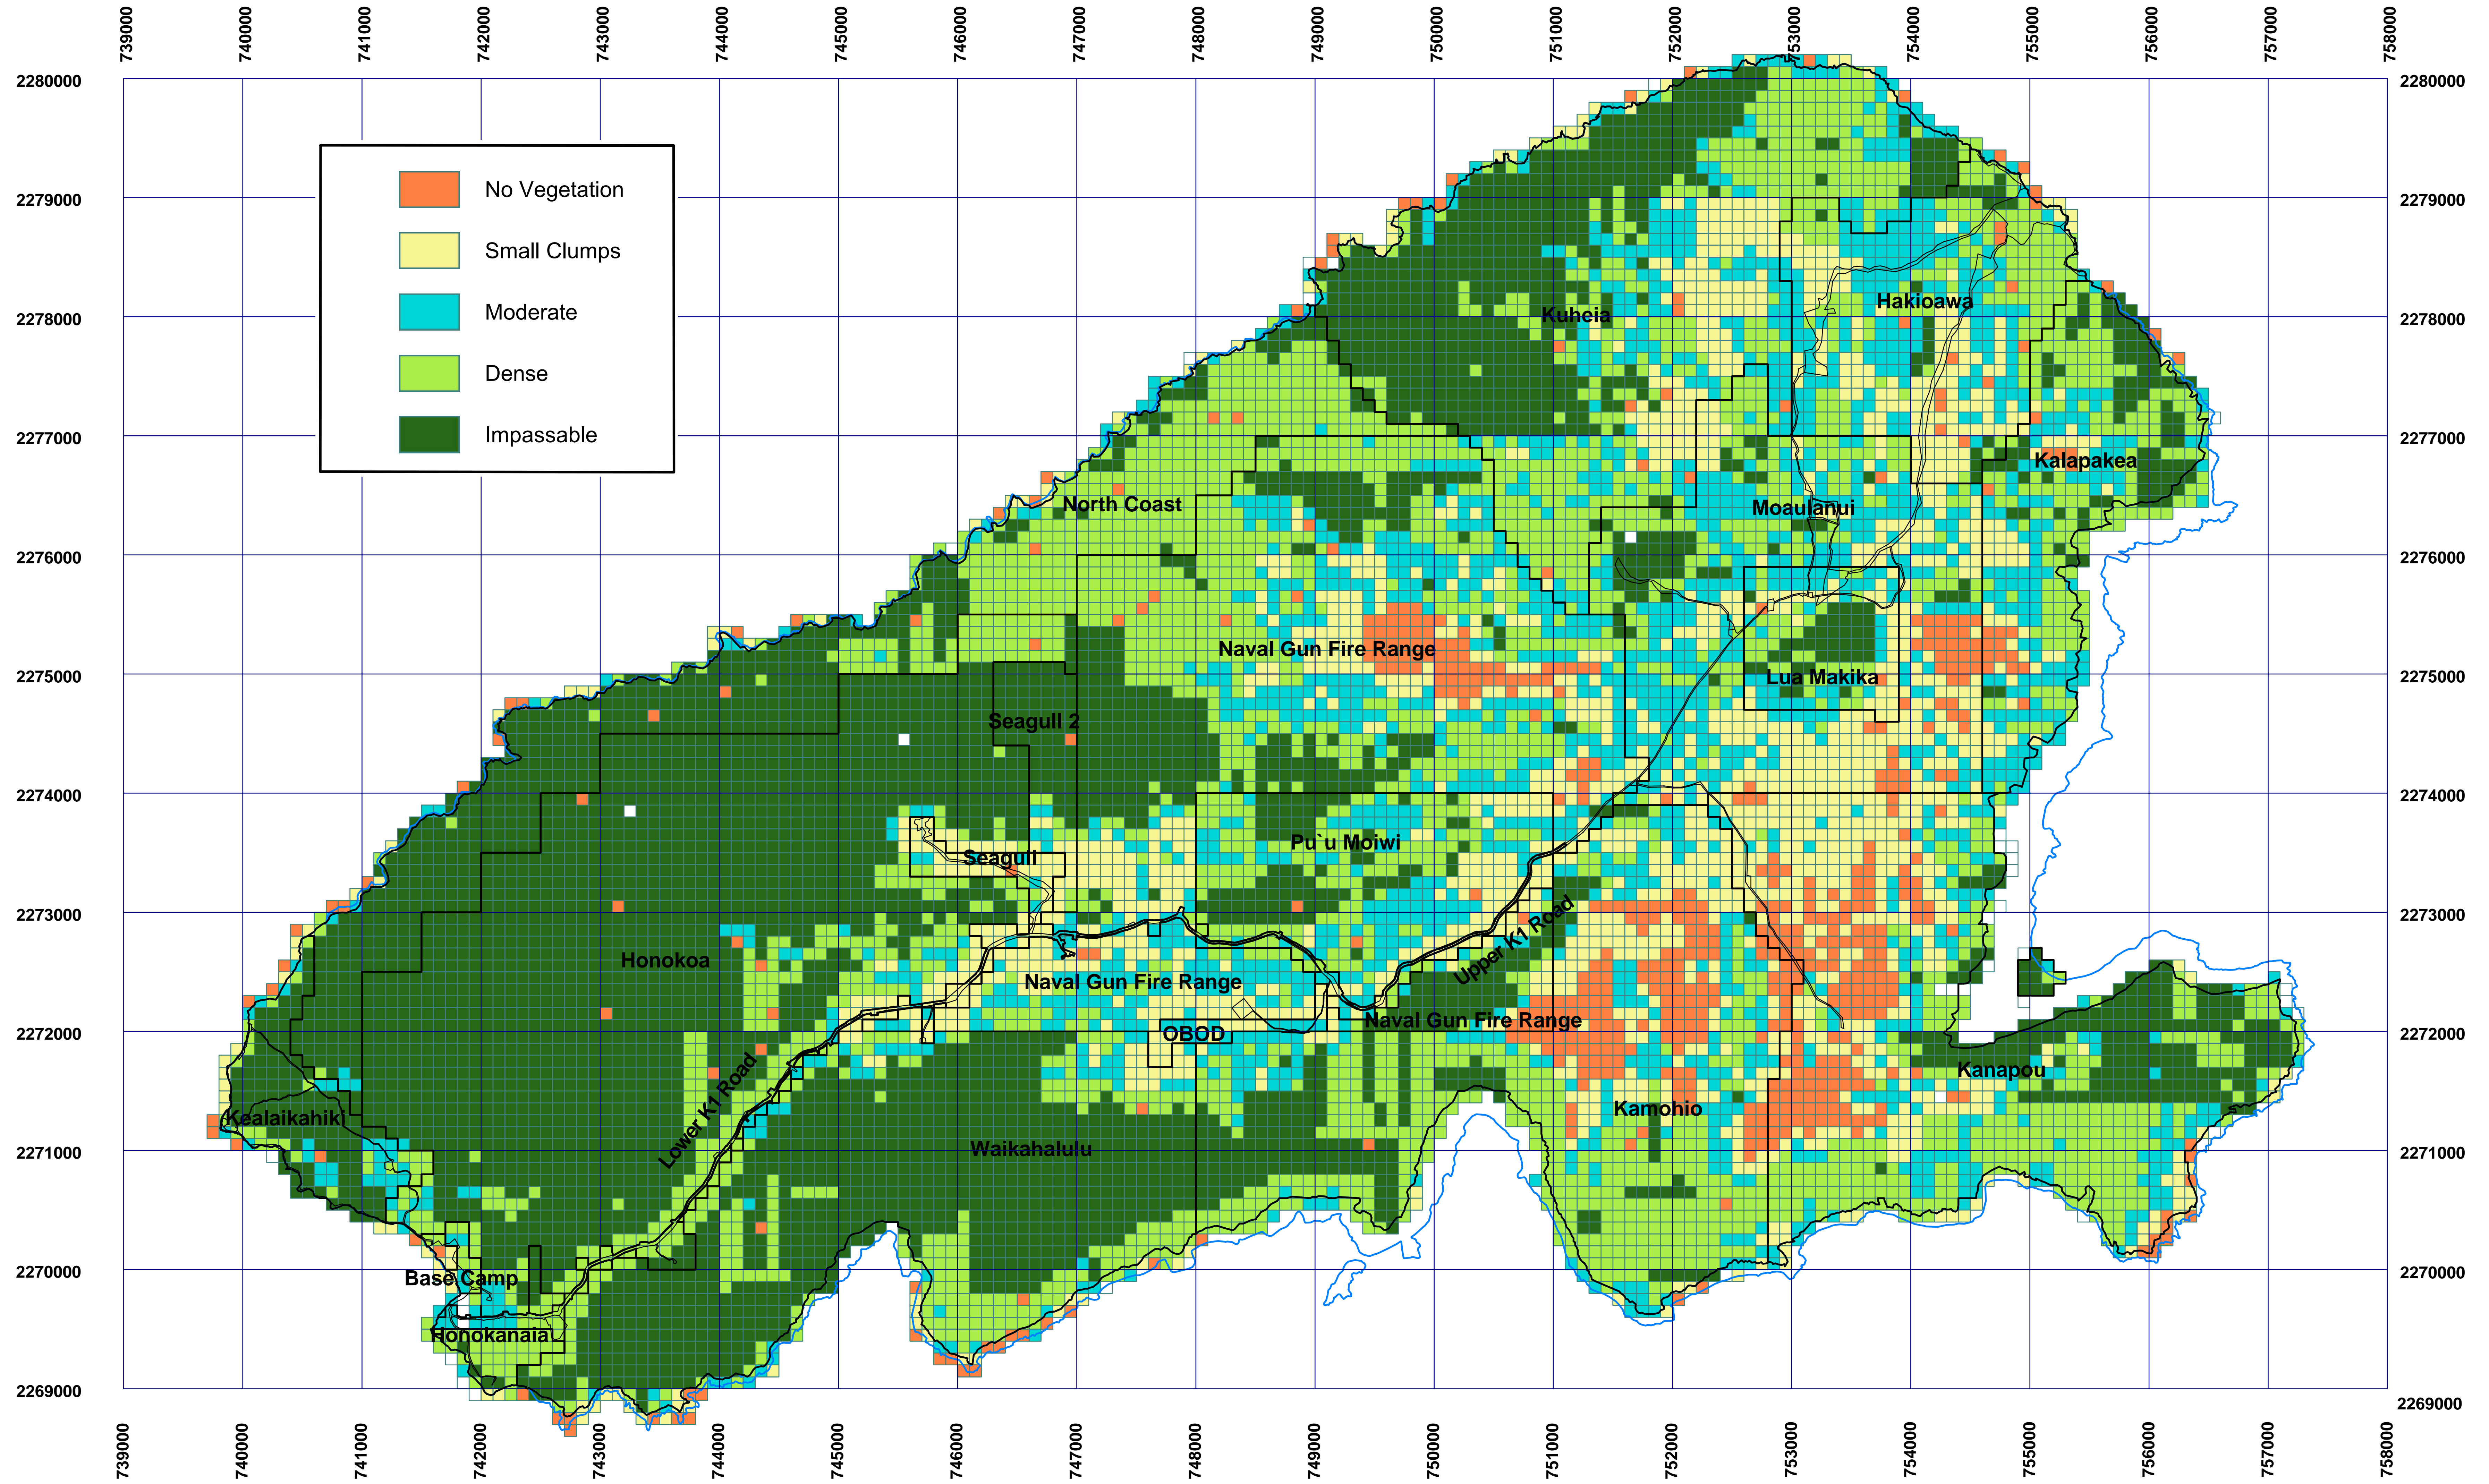

### **5.3 UXO Clearance Results**

Table 10 summarizes the clearance results for all work areas completed. The areas listed below represent only those areas within the parcels described in the Clearance Maps. Clearance acreage is calculated based upon the actual field survey descriptions as listed on the Clearance Maps. Clearance maps for each of the work areas listed were previously submitted in the individual Work Area-Specific After Action Reports.

**Notes to Table 10:**

**5.3.1 Uncleared Exception Areas**

Uncleared exception areas are those parcels of land within a work area designated for UXO clearance that were left uncleared due to terrain, existing structures or other restrictions. The surrounding areas were cleared as indicated by exception area boundaries.

**5.3.2 Uncleared Areas**

Uncleared areas represent those areas of Kaho`olawe that were not designated to be cleared, and therefore left uncleared. This calculation also includes those areas that were cleared using the Risk Reduction process described in Section 5.4.1.

**5.3.3 Exception Areas within Tier Two Areas**

Geophysical Detection Teams were not able to conduct Subsurface UXO Detection Sweeps within all areas of the designated Tier Two work areas due to inaccessibility of some gullies and ravines or interference by existing structures. These areas remain Tier One UXO cleared if UXO surface sweeps were completed or uncleared if UXO surface sweeps were not.

**5.4 Additional Clearances**

**5.4.1 Risk Reduction Clearance**

Near the completion of the Project, in July 2003, a new clearance standard was proposed and approved (PACDIV letter 8020 Ser. OPS/1435 of July 21, 2003) to treat some of the previously uncleared areas that were to remain after the Navy’s UXO clearance objectives were obtained. This new clearance standard was termed “Risk Reduction” and targeted uncleared areas with a high density of UXO based upon the Area Assessment’s UXO hazard assessment as seen in Figure 4. Risk Reduction clearance was implemented to reduce public risk as well as reduce the future UXO response requirements. Uncleared areas with a high density of UXO, as determined by the results of the Area Assessment, were cleared using the Risk Reduction process as time and funding permitted. The Navy determined there was no reasonably safe land uses associated with this type of clearance. Table 11 provides a summary of the areas that were cleared to the Risk Reduction Standards.

**Table 11: Risk Reduction Clearance Summary**

Work Area	GMUs Completed	Estimated Area (m2)	Estimated Area (Acres)
Honokoa	190	1,900,000	469.5
Kamohio	105	1,050,000	259.5
Naval Gunfire	131	1,310,000	323.7
Seagull II	48	480,000	118.6
Waikahalulu	203	2,030,000	501.6
Total	677	6,770,000	1,672.9

Note: Area and acreage calculations are estimated since final clearance boundary surveys for these areas were not within the scope of this project.

Risk Reduction clearance was defined as the removal or clearance of all unexploded ordnance from the surface of the work area. A Risk Reduction clearance surface sweep is conducted by visual and/or detector-aided operations, with a zero (0) foot subsurface investigation. Detector-aided operations will be used when visibility is restricted. The UXO team members:

- Detected and removed UXO only materials, using the minimum Risk Reduction clearance criteria in Table 12 below. Minimum UXO detection requirement for Risk Reduction was an 85% probability of detection of UXO only with a 90% confidence level.
- Inspected surface materials and removed all target materials and UXO-related remnants that required demilitarization or had voids and crevasses that could not be visually inspected explosive free in accordance with current standard operating procedures. All other UXO-related remnants and non-UXO-related materials were not removed.
- Flagged, made a preliminary identification, and recorded previously unidentified UXO by grid map units. Each item was given a unique identifier number for monitoring purposes and chain-of-custody for each item commenced.
- Environmental concerns identified during the investigation phase of the assessment process were located, and the area remediated as needed. Target vehicles were verified as UXO-free and removed. Remnant military aircraft crashes were collected, segregated, and removed.
- Areas restricting access to clearance teams due to dangers from unstable embankments, loose footing, sheer drop, or excessive slope was avoided.

**Table 12: Minimum Risk Reduction Clearance Criteria**

UXO	Minimum Size (English)
UXO*	All
Small Arms	0.22" Diameter to 50 Caliber
40mm Grenades**	1.6" Diameter
M26 Submunition	2.75" Diameter
M38 Submunition	1.75" Diameter
And Similar Items**	
Environmental Trash including tires, batteries, drums, target vehicles and aircraft crashes	All observed
Miscellaneous non-hazardous trash	All observed

\*UXO includes all items that contain explosives, such as Fuzes, Bulk Explosives, Pyrotechnics and Propellant

\*\* Nonferrous Items

Table 13 summarizes the materials that were removed as part of the Risk Reduction clearance action:

**Table 13: Risk Reduction Clearance and Removal Summary**

Item	Remove	Leave
UXO	X	
UXO remnants		X
UXO remnants requiring demilitarization		X
UXO remnants with inaccessible voids or cavities		X
Target Materials	X	
Environmental concerns	X	
Casings		X
Military airplane crash remnants	X	
Small Arms	X	

Institutional controls for these areas were consistent with ESS section 11.c.(4)(f) Special Management Areas. These areas remained hazardous and no changes to the May 1994 deed regarding land use were made for these parcels. The following summaries the land use restrictions for these parcels:

<b>Designated Use Area:</b>	Special management areas
<b>Boundary Marker Construction:</b>	Highly visible polymeric tube markers with custom-printed reflective labels.
<b>Installation Guidelines</b>	To be set along the perimeter of the area at visual sight distance of one another.
<b>Land Use Restriction:</b>	Area remains hazardous with restricted access and no intrusive activities.
<b>Access Guide Restrictions:</b>	Restricted access with EOD/UXO escorts only.

Figure 11: indicates the locations that were cleared to the Risk Reduction standards.

### 5.4.2 Shoreline Clearances

The UXO clearances described in Section 5.2 above was conducted from the surveyed shoreline, high water mark as defined by the State of Hawaii Administrative Rules, inland to the work area boundary. Areas between the surveyed shoreline and the water's edge were also cleared, but not included in the Work Area-Specific After Action Reports or as part of the Notice and Certification Documents. These areas include sandy beaches, inter-tidal regions and along the rocky coastline. Accessibility and safety limits the performance of a UXO clearance in the region from the surveyed shoreline to the water's edge. Some of these regions experienced surging tides and large swells that could have been hazardous. Additionally, the unstable nature of beach strands as well as the low water table made excavation of anomalies to the required depth difficult without shoring or cofferdams.

UXO clearance in the region from the shoreline to the water's edge was limited to the safely accessible areas. Accessibility and safety was the responsibility of the individual clearance team leader to determine on the day and time the particular Grid Map Unit was assigned for clearance. The limits of the UXO clearance, whether Tier One or Tier Two, was to the safely accessible water's edge for the tidal and surf conditions experienced by the UXO clearance team on the day and time the clearance was performed. This was necessary to mitigate the hazards associated with working in the shoreline areas. The method of clearance in this region is consistent with the methods of clearance used in other portions of the project.

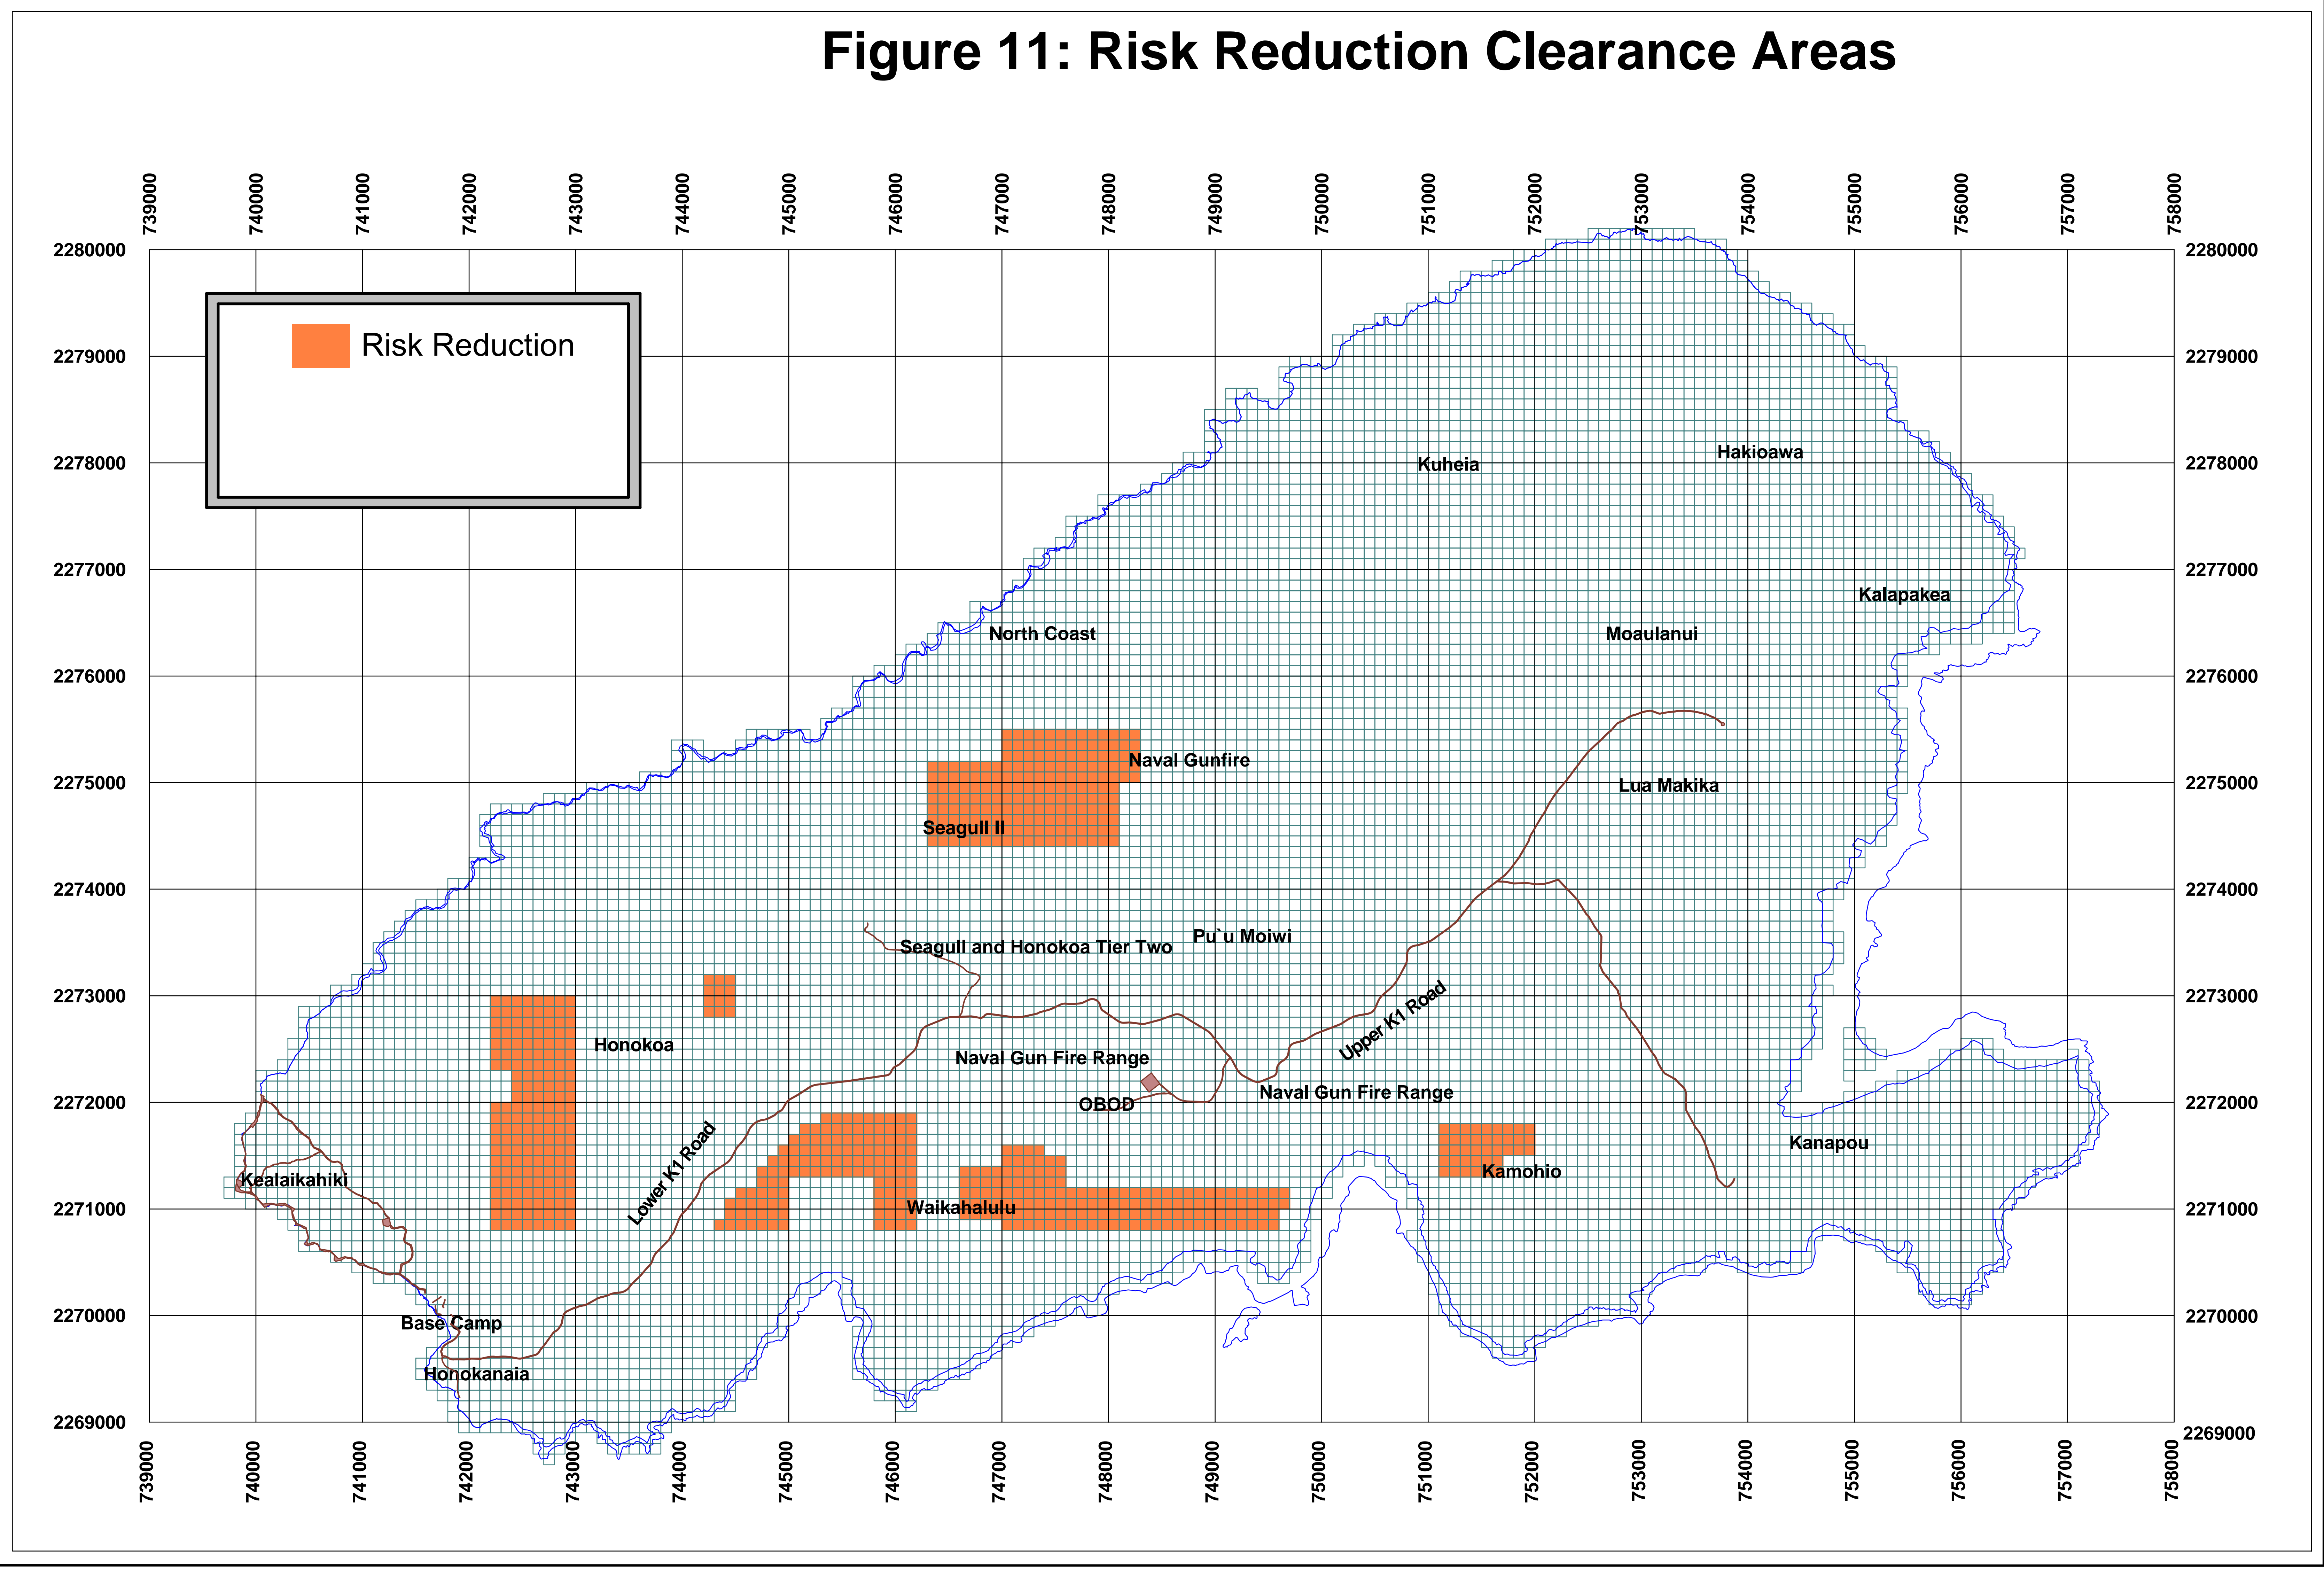

Tier Two UXO clearance was further limited in this area due to the low water table and unstable sand. Anomaly excavation proceeded to the depth of the water table or to the point where the side slope of the excavation site becomes unstable if the designated clearance depth is not reached. Any anomalies not excavated were noted in the Subsurface Detection/Excavation Forms.

Due to the unstable nature of these inter-tidal regions, clearance results of these inter-tidal regions were not included Work Area-Specific After Action Reports and the supporting Notice and Certification Documents provided by the Navy to the State of Hawaii. Records of the clearance in these inter-tidal regions are located in the project's data management system and GMU files.

UXO items removed from these areas are listed in Supplement C.

Figure 11: Risk Reduction Clearance Areas

---

## 5.5 Lessons Learned

The following are the Lessons Learned, prepared by the Project's Range Control Officer and solicited inputs from all functional areas.

### 5.5.1 Work Plan Updates

**Lesson Learned**— *The Work Plan needs to be updated on a regular basis, so that changed information is captured periodically making the writing of the final report easier and more accurate.*

This is a lesson learned that was also described in the Model Project Lessons Learned Report. While document control practices were established, periodic changes to the Work Plan appendices such as Safety and Quality needed to be incorporated into the overall Work Plan and Contract as the project progressed. For a long-term project, periodic updates are essential otherwise valuable information will be lost.

### 5.5.2 Standard Operating Procedures

**Lesson Learned**— *The approval process for the standard operating procedures needs to be streamlined with established suspense dates for completion of reviews, so that field implementation can occur faster.*

Most of the standard operating procedures were generated in the field. However, on the contractor side there were four functional manager signatures on the Review Board that were always required in the review process (Historic Properties Quality Control Manager, Natural Resources Quality Control Manager, UXO Quality Control Manager, UXO Safety Officer, and Range Control Officer). Additionally, there were three separate organizations (Maui Technical Office, Project Management Office, and the Navy) involved in the technical review. The Review Board process was important to keep all the on-island managers informed. The need for technical review was also necessary. However, the management of the process through the tracking of suspense dates was not established, thereby resulting in standard operating procedures that were delayed in implementation. During this period, teams in the field were unable to implement the revised procedures.

A system for authorizing interim field change approvals to SOP's alleviated the lag for completion of reviews. Additionally, it enabled temporary changes to be effected that did not require a permanent and formal change to the standard operating procedure. However, this practice compromised the document control procedures and some changes were not captured in the formal process.

### 5.5.3 BIP Package Review Procedures

**Lesson Learned**— *The approval process for the BIP package review procedures needs to be streamlined with established suspense dates for completion of reviews, so that the scheduling of BIPs can be more efficient.*

BIP packages were generated in the field. However, on the contractor side there were four functional manager signatures on the Review Board that were always required in the review process (Historic Properties Quality Control Manager, Natural Resources Quality Control Manager, UXO Quality Control Manager, UXO Safety Officer, and Range Control Officer). Additionally, there were three separate organizations (Maui Technical Office, Project Management Office, and the Navy) and sometimes a fourth (Kaho`olawe Island Reserve Commission) involved in the technical review. The Review Board process was important to keep all the on-island managers informed. The need for technical review was also necessary;

however, the management of the process with established suspense dates never occurred, thereby resulting in BIP packages that were delayed. This lag impacted the expedient disposal of UXO items, effective sequencing of work, and required considerable progress tracking to determine delays.

#### **5.5.4 Tracking of Completed Work**

**Lesson Learned**— *The tracking of completed work should be shared by all project databases.*

Due to the harsh environmental conditional in the field, paper data entry forms were used to track work and progress. These forms were entered into the data management systems, but the lag between the activity and availability of the data was too great to use the data management system in as real-time management tool. Various electronic entry devices were tested, but could not withstand the harsh field conditions. A faster, electronic entry system is need that could withstand harsh environmental conditions.

#### **5.5.5 Nonconformance Reports**

**Lesson Learned**— *Nonconformance reports should be used to report on systemic and/or process problems not merely subjective deficiencies.*

The nonconformance process was inundated with nonconformance reports identifying simple deficiencies rather than being focused on systemic and/or process problems. Consequently, these reports were given a low priority to correct because frequently the deficiency was based on an incorrect interpretation of contractual criteria, or required the movement of a team from one work area to another. Even though numerous attempts were made to ensure standardization of inspection criteria, adoption of a common standard was never attained. Many hours were expended correcting minor deficiencies and moving teams around to fix subjective deficiencies.

#### **5.5.6 Understanding of Contractual Clearance Criteria and Project Plans**

**Lesson Learned**— *An understanding of contractual clearance criteria and project plans should be uniform by all and not be altered due to subjective interpretations.*

The contract was very explicit as to the criteria required for clearance, but yet the criteria were still enforced at different standards due to subjective interpretations. During numerous evaluations, comments and observations reflected an incomplete understanding of particular sections of a project plan. During the commencement of the project, a partnering session was conducted which enabled an exchange of ideas and concepts to be communicated and decisions to be made as to how something was going to be accomplished. These sessions should have been continued and scheduled periodically, quarterly is recommended, to identify issues and workout agreed upon decisions for implementation.

#### **5.5.7 No-work Decisions due to Inclement Weather**

**Lesson Learned**— *The decision not to work due to inclement weather must remain with the Range Control Officer and not the transportation carrier.*

The Range Control Officer is responsible for coordinating on-island activities. The decision not to work should be a coordinated decision between the transportation carrier, on-site personnel, and the Range Control Officer. The transportation carrier should determine when it is unsafe to fly, but not be allowed to dictate when conditions were not conducive to performing work on the island.

### 5.5.8 Scheduling of Activities

**Lesson Learned**— *All activities should be incorporated into a comprehensive schedule to facilitate planning and execution of related activities.*

Even though this is a UXO clearance project, numerous non-UXO activities (e.g. survey, environmental) need to be performed in order to accomplish necessary tasks. Many of these non-UXO activities were not directly integrated into the UXO clearance process, making tracking of these activities very cumbersome and at times conflicting with operations. A coordination meeting was scheduled weekly to coordinate operations and the majority of the major activities, but smaller activities were not always discussed nor captured. A solution to this problem would have been to integrate these non-UXO processes and related paperwork into the main UXO-clearance process so that tracking included the complete effort thereby facilitating the management and oversight of the entire project process.

### 5.5.9 Joint Venture and Sub-contractor Organizations

**Lesson Learned**— *In order for a joint venture to avoid personnel issues between the two partners and sub-contractors, workers for the joint venture should be employees of the joint venture.*

Joint venture organizations are difficult to manage if each individual partner maintains their own employees as members of their own company. This problem was apparent during times in which individuals needed to be disciplined for non-performance. Individuals could side with one company or the other depending as to which company would support their position best, thereby being able to play the system and avoid the reprimand. Even though a Standards of Conduct policy document was created to attempt to standardize equal enforcement of infractions, companies still exercised their prerogative as individual organizations and enforcement continued to vary. The inability to discipline personnel, particularly those that were consistently absent, became frustrating to supervisors who eventually would give up and let their employees get away with wrongdoing.

### 5.5.10 Team Organization

**Lesson Learned**— *In order for a team leader to effectively manage an assigned team, the leader and team members of the team should be employees of the same company.*

The problem experienced is directly related to the fact that neither the team leader nor the team members were from the same company. Consequently, there existed no formal chain of command to disseminate and carryout orders. Team members were able to play both sides based on their liking. The inability to control and discipline personnel became frustrating to a team leader who eventually would give up trying to manage his or her team. This issue resulted in loss of team productivity. An interim fix to alleviate this issue was to establish a “lead sweep” which functioned as the foreman or supervisor of the team.

### 5.5.11 Team Membership

**Lesson Learned**— *The size of a UXO team should be large enough to be able to complete the tasking required, but small enough to enable the team leader to manage the team and that an acceptable ratio of UXO to non-UXO personnel be maintained.*

At the commencement of the project, the initial size of the sweep team was a total of six personnel to allow for the transport of the complete team to the work site into a 6 passenger helicopter and to maintain a ratio of five non-UXO personnel to one UXO person. This ratio provided a manageable span of control for the team leader and limited the level of safety risk per activity. As time progressed, team leaders became more familiar with their SOP's,

environment, and jobs; the Navy's confidence in the contractor's performance increased; and larger transport helicopters became available, the number of personnel per team was increased. Size of the team was based on the activity being performed and the risk activity code (RAC) level of the GMU. For example, for a surface sweep team working in a lower RAC of 3 and 4, 9 operators, 3 support, and 1 other person were authorized; for a higher RAC of 1 and 2, 9 operators, 1 UXO Specialist as the support person, and 2 other persons were authorized.

### 5.5.12 Qualification of Team Leaders

**Lesson Learned**— *Team leaders should be appointed based on previous experience as a supervisor and not merely on the number of years in the UXO industry.*

Due to the number of team leaders required, the selection process for team leaders was based on three criteria: previous experience as a team leader, UXO/EOD experience, and performance to date. Unfortunately due to the number of team leaders required, many of the team leaders were chosen based solely on the number of years of UXO/EOD experience and performance to date, which resulted in the selection of many novice individuals that were not seasoned as supervisors. This inexperience as a supervisor created additional work for middle management.

### 5.5.13 Geophysical Teams

**Lesson Learned**— *Geophysical teams should be assigned directly to the clearance organization instead of being a separate department.*

By having the geophysical teams being a separate entity from the clearance effort, inefficiencies in geophysical teamwork assignments occurred. Better coordination with the entire Tier Two UXO clearance process would have been realized if the geophysical group was directly controlled by the clearance organization. Several instances occurred in which a GMU had to be reworked by an area preparation team because of the inability to coordinate priorities between the geophysical organization and operations.

### 5.5.14 Geophysical Manning on Excavation Teams

**Lesson Learned**— *The optimum geophysical team manning on an excavation team is a ratio of one geophysical team to two excavation dig teams in a GMU (100-meter squared).*

When the project first started, a ratio of one geophysical team to each excavation team was envisioned; however, due to the number of anomalies and the increased number of dig teams necessary to complete an excavation effort in a timely fashion, additional geophysical teams were required. Unfortunately, due to manpower constraints within the geophysical organization, additional geophysical teams were not available. A system of using multiple colored flags was developed to identify those excavations that still needed geophysical verification as clean. This system was satisfactory, but was still inefficient in that the dig teams would lose time waiting for the geophysical checks.

### 5.5.15 Support Workers on Excavation Teams

**Lesson Learned**— *The use of support workers on excavation teams is a very efficient approach to save limited UXO personnel during a period of manpower shortfalls.*

Contrary to most manpower practices on other UXO projects, this project used non-EOD support workers to assist in the excavation efforts by establishing strict standard operating procedures that limited their use. These restrictions included the maintaining of a one UXO person to one support worker ratio per manual dig team and limiting the support workers to digging only up to the initial identification of an item as a UXO and then allowing the UXO

person to complete the excavation. Excavation teams were required to dig only enough to be able to categorize UXO items in a general category of bomb, projectile, 20-mm projectile, grenade, propellant, raw explosives, rocket, guided missile, mortar, small arms, OE component, submunition, small arms, or unknown. The positive identification and further excavation effort was deferred to the specialized, access and identification teams.

### 5.5.16 Area Preparation

**Lesson Learned**—*The level of pruning or cutting of vegetation required has to be clearly understood by the work crews.*

Area preparation involves the selective pruning or complete removal of vegetation to allow the other clearance phases to proceed. The level of pruning that was required was only that which impeded the conduct of future clearance efforts. Even though standard operating procedures had been developed, standardization of effort across the teams was difficult to obtain. Some of the teams felt an obligation to prune more than was necessary for the subsequent phases. This obligation was based on their relationship and devotion with the Island and was not something anyone could change. The result of this non-standardization was evident in lower production rates of those teams that elected to not comply with the standard expectation. Additionally, some teams elected to cut and stack logs of wood neatly in conspicuous locations for future use; again, this added effort consumed time.

### 5.5.17 Surface Sweep

**Lesson Learned**—*The level of removal of materials during the surface sweep phase has to be clearly understood by the work crews based on contractual specifications.*

Surface sweep involves the removal of UXO-related remnants and non-UXO related material. The contractual size specification for an UXO-related remnant is 2-inch by 1-inch. Frequently, sweep personnel felt obligated to remove material that was much smaller than that required. Additionally, the use of handheld magnets resulted in the collection of materials that was less than that required. This non-conformance not only impacted the surface sweep team's production, but also that of the material management teams in that it increased their collection and inspection efforts.

### 5.5.18 Placement of non-UXO Material Collected

**Lesson Learned**—*Teams should be afforded the flexibility to consolidate non-UXO material to the most convenient location within the GMU to reduce unnecessary movement of material.*

Initially the surface sweep SOP directed the consolidation of non-UXO material to only the southwest grid corner stake in order to standardize the staging locations of materials across the island. Due to the quantities of materials being collected, removal of the built-in error to the GPS accuracy, and issue of handheld GPS to all the teams, this restriction was lifted allowing the teams the flexibility to locate materials anywhere within the GMU. This change facilitated the consolidation of materials and eliminated the need to move materials unnecessarily.

### 5.5.19 Access and Identification

**Lesson Learned**—*Positively identifying the fuzing of UXO items is unnecessary if the intent is to just develop future risk analysis.*

Access and identification involves the positive identification of UXO items. Initially, the expectation was to positively identify both the fuzing and the ordnance item. This requirement was subsequently changed to the most hazardous and common fuze(s) found with that item. This change made sense because it eliminated the need to further excavate items that were

partially buried, which provided some tamping effect during disposal operations. For the majority of the UXO, the UXO items found were frequently the same as those that were found previously, so this activity was relatively easy. Periodically an item was found that was unique, but with additional research positive identification was attained.

### 5.5.20 UXO Disposal

**Lesson Learned**—*The use of non-electric demolition procedures greatly facilitated disposal operations.*

At the beginning of the project, disposal was conducted using electric procedures with a blasting machine that provided positive control of the shot being fired. As client confidence increased with the contractor's procedures, several remote firing devices were purchased and used. These procedures were effective, but time consuming due to the need to lay out firing wires across the fragmentation zone of the UXO item to the safe area. To further complicate matters, the Navy ordnance publication (OP-5) was modified by a revision that further increased the fragmentation distances from those previously calculated using the fragmentation formula. Eventually, electric procedures were replaced by non-electric procedures due to their efficiency and ease of use; however, this compromised firing control, so shots were typically scheduled for Fridays when the majority of the workforce was not present.

### 5.5.21 Material Management of Non-UXO Material

**Lesson Learned**—*The use of large over-sized sacks to contain non-UXO material collected greatly facilitated handling of material.*

Material management is a process that has continuously evolved since project inception due to the quantities of materials being collected that far exceeded anticipated projections. Initially it was envisioned that placing materials in sandbags was an adequate approach, but as the poundage of the materials collected increased alternate methods were pursued. Wooden boxes were constructed and placed at vehicle accessible locations to consolidate numerous sandbags within a larger container to facilitate handling. In those instances in which placement of wooden boxes was not feasible, large over-sized sacks, "super-sacks" with the dimensions of 34" x 34" x 48", were purchased to handle multiple sandbags and again to facilitate handling for those remote locations. Additionally, the super-sacks were configured with a bail to allow the on-island helicopters to retrieve the sacks without the aid of a ground crew.

### 5.5.22 Use of hand held detectors

**Lesson Learned**—*More training should have been provided on the handheld detectors.*

Teams needed more classroom and practical training with the handheld detectors during the initial indoctrination to the project. A lot of confusion existed within teams as to how the equipment needed to be setup, programmed, and used for optimum effectiveness. This was eventually overcome by standardizing detector settings and additional training.

### 5.5.23 Exclusion Zones

**Lesson Learned**—*By modifying the standard operating procedures, the exclusion zone can be reduced so that it does not impact the conduct of other activities within the vicinity of the one being performed.*

At the beginning of the project, a 400-meter exclusion zone that was based on the fragmentation distance of the most common large UXO item found on the island, the 5" projectile, was established around each clearance team. No other activities were allowable within the exclusion zone. This exclusion zone of 400-meters unnecessarily conflicted with

other activities within this zone. By modifying the standard operating procedures of clearance activities, this zone was later reduced to 100-meters. The following modified procedures enabled this change to be accepted:

- UXO clearance teams were only required to categorize UXO items in a general category of bomb, projectile, 20-mm projectile, grenade, propellant, raw explosives, rocket, guided missile, mortar, small arms, OE component, submunition, small arms, or unknown. The positive identification and further excavation effort was deferred to the specialized, access and identification teams.
- All digging by excavation teams was concentrated to the side, and at least 12 inches away from the suspected edge of the anomaly, to avoid digging on top of the item.

---

## Section 6 Disposition of Scrap/Range Residue

---

### 6.1 On-Island Transport

UXO remnants, other materials (non-UXO), and target materials collected during the UXO clearance process were transported to the Inspection Point to verify that no UXO entered the waste streams. All materials were sorted and underwent thermal treatment and/or demilitarization, if necessary, and were transported off-island. Supplements D and E list the field weights of all UXO remnant and non-UXO remnant material collected, respectfully.

### 6.2 Off-Island Transport

In March 2001, the project management decided to ship all materials collected on the range, UXO-remnants, non-UXO remnants, range vehicles and miscellaneous trash, off-island. Other options that were evaluated included the creation of an on-island landfill and use of an "Air-Curtain" burner for tires and green waste that would produce smokeless combustion. The Navy determined that land-filling was not a viable option and the use of the "Air-Curtain" burner still required dealing with non-combustible steel belts and residual ash.

Metallic materials were shipped to scrap metal vendors. This occurred after all metals were either visually verified as UXO-free or thermally treated, as well as demilitarized as necessary. Large pieces of metal were shipped to Hawaii Metals Recycling. The remainder of the materials was shipped to the Navy Recycling Center and subsequently to a Honolulu-based scrap vendor. All materials were shipped off-island in covered dump trailers. Witness seals were installed when the trailers were filled to prevent the accidental and/or intentional introduction of UXO. Witness seals were checked upon receipt in Honolulu to verify integrity of the shipment.

Tires were disposed of utilizing a subcontract with Pacific Commercial Services. The subcontract provided for the off-island processing of both unpainted tires and tires with lead paint. Processing of the lead painted tires required additional permitting. The subcontractor obtained the special operating permit from the Hawaii State Department of Health. The permit was issued in January of 2003 and expired upon completion of painted tire processing in November of 2003.

Construction debris and other non-hazardous waste materials such as wood, plastic, and concrete was shipped off-island and disposed at general landfills on Maui and Oahu. Some of the concrete debris was shipped off island to a concrete recycler for recycling.

The majority of the materials were shipped off-island in 40-foot long-body dump trailers that were filled and then staged at the Base Camp to awaiting shipment. In addition to the dump trailers, wooden boxes, drums and smaller 20-foot open containers were used to haul material off-island. Two barges were used to haul these trailers. The smaller barge was capable of loading seven trailers at once, while the larger barge had the capacity for fourteen trailers. Initially, the smaller barge was planned to ship all the material off-island. Later, when it was determined that there was going to be more materials and equipment than expected, as well after a month-long weather delay, the large barge was brought in to be used in conjunction with the smaller barge. Loading occurred at Honokanaia Bay on Kaho'olawe and off-loading was at the Victor Pier at Pearl Harbor Naval Base. Simultaneous landing of both barges at Base Camp was not possible due to the size restraints of the bay and beachhead.

Chain of custody was maintained from the on-island loading storage locations, through the off-island shipping to the off-island recipient of the scrap material. Custody records were submitted to the Navy. A summary of the Chain of Custody forms is presented in Supplement H.

## Section 7 UXO Clearance Boundary Description

The UXO clearance was documented by land survey and recorded in a set of UXO Clearance Maps submitted for each work area as part of the Work Area Specific After Action Reports.

Azimuths and coordinates were referred to Zone 4, Universal Transverse Mercator Projection (UTM), and World Geodetic System 1984 (WGS 84) ellipsoid. Horizontal controls were referenced to the North American Datum of 1983 (NAD 83) and the State of Hawaii Coordinate System – Zone Two.

For documentation and control purposes, the physically assessable portions of Kaho`olawe were surveyed into 100 meter by 100 meter Grid Map Units (GMU) using Geographic Position System (GPS) surveying equipment. Each GMU was given an identification number utilizing the coordinates of the southwest corner of each GMU. Work areas were assigned based upon the State of Hawaii clearance priority list. Clearance boundaries were established around similarly cleared parcels of land within each work area and surveyed. The corners of each clearance boundary were physically marked in the field with one-foot plastic orange hubs. Uncleared exception areas, within UXO-cleared parcels of land, were also surveyed and marked accordingly. Witness posts in the form of Engineering Control Post were used to visibly delineate these exception areas in the field. Further discussion of Engineering Controls is in Section 10.3.

Table 14 lists the maps that were submitted and their corresponding NAVFAC drawing numbers. Full-size copies of all UXO Clearance Maps were submitted to Naval Facility Engineering Command, Pacific Division (PACDIV) for distribution to the State of Hawaii and are on-file at PACDIV.

**Table 14. List of Maps**

AAR No.	Work Area	NAVFAC Drawing Numbers
1	Lua Makika	7964430 – 7964434
2	Kanapou	7965942 – 7965959
3	Kalapakea	7965860 – 7965866
4	Kealaikahiki	7966071 – 7966080
5	Hakioawa	7965960 – 7965971 7966191 – 7966202 7968573
6	Beck's Cove	7969491 – 7969492
7	Seagull and Honokoa Tier Two	7969550 – 7969554
8	Seagull II	7969555 – 7969558
9	Waikahalulu	7969559 – 7969567

## Section 8    Uncleared Areas

---

Uncleared areas that remained were classified into two categories. The first were uncleared exception areas. These uncleared areas, located within UXO-cleared regions, were not cleared due to either terrain or existing structures that interfered with UXO Tier One Clearance operations. The document “ Guidance Document for Terrain-Based Levels of Clearance” was developed to assist the UXO Surface Sweep Teams in delineating the limits of normal UXO Surface Sweep operations. To clear beyond this delineation, special UXO clearance techniques such as rappelling, structural shoring or climbing would have been required. The additional expense to clear these little used areas was mutually determined by the State of Hawaii and the Navy as to be a low priority and were deferred by mutual agreement as the result of the CY2000 Tier One/ Tier Two Working Groups. This was later reflected in clarification letters from the State of Hawaii for the land clearance priorities.

The second category of uncleared areas was those areas that were not cleared due to funding and time constraints. The State of Hawaii determined the priority of clearance, as documented in the Land Use Plan (PBR Hawaii 1995) and subsequent KIRC letters to the Navy. UXO clearance was assigned based upon these priorities. Those areas, which were of lower priority, were assigned to be cleared last and eventually funding and time did not allow for all areas to be cleared.

Uncleared exception areas are documented in the various Work Area Specific After Action Reports and are indicated on the Work Area Clearance Maps listed in Table 14. The areas that were left uncleared due to time and funding constraints are shown in Figure 3. Areas that were cleared to the Risk Reduction standards as described in Section 5.4.1 are also considered uncleared for certification purposes.

## Section 9 Residual Risk

The UXO clearance process does not completely remove all UXO/OE items present in the parcel of land being cleared. As specified in the Explosive Safety Submission, a geophysical detector probability of detection of 85% with a confidence level of 90% was established as the minimal UXO clearance criteria. This minimum UXO clearance criteria was maintained and verified through an extensive Quality Control process and independent Quality Assurance review.

This project has developed a robust data collection and information database that in the future may provide a quantitative map of residual risk associated with the potential UXO/OE item that was not discovered and removed during the UXO clearance process. Lacking a definitive standard to develop a quantitative approach to residual UXO risk at this time, a qualitative approach has been presented to characterize residual risk for the future end users.

The residual risk associated with previously UXO/OE contaminated land is consistent with the level of UXO clearance completed. Additionally, the residual risk is also associated with the expected end use of the cleared parcel. Consistent with a qualitative approach to express the residual risk associated with the post-clearance use of this parcel of land, a graduated risk scale has been developed. Table 15 describes the residual risk associated with the UXO clearance actions completed for the Kaho`olawe Island Reserve.

**Table 15. Residual Risk for Kaho`olawe Island Reserve**

Level of Clearance	Residual Risk	Conditions
Tier Two (Surface to Four Feet)	Low	Consistent with recommended end uses and restrictions in Section 2
	Moderate	Activities not consistent with the recommended end uses and restrictions specified in Section 2
Tier One (Surface Only)	Moderate	Consistent with recommended end uses and restrictions in Section 2
	High	Activities not consistent with the recommended end uses and restrictions specified in Section 2
Uncleared Area (also Risk Reduction Clearances)	High	NA

## Section 10 Institutional Controls

### 10.1 Notice and Certification

The Explosive Safety Submission documented the use of the restrictive covenants to restrict land-use. The form of the restrictive covenant was not determined in the Explosive Safety Submission, but the final form of the restrictive covenant is a series of Notice and Certifications associated with each clearance work area. The Notice and Certification provides certification of the ordnance clearance or removal actions taken and the dates of those actions. The Notice and Certification also provides notice of those uses the Navy considers to be reasonably safe for each parcel if the applicable advisories, as stated, are implemented. Notice and Certification Documents were generated by the Navy to be filed with the State of Hawaii Bureau of Conveyance.

### 10.2 Island Wide Engineering Controls

Sixteen Coastal Warning Signs (3' X 5'-6") were established around the perimeter of Kaho`olawe. These signs were installed at locations that were the most likely points of entry to the island. Figure 12 illustrates the text used for the Coast Warning Sign. Figure 13 shows the installed locations for the Coastal Warning Signs.

Figure 12: Coastal Warning Sign

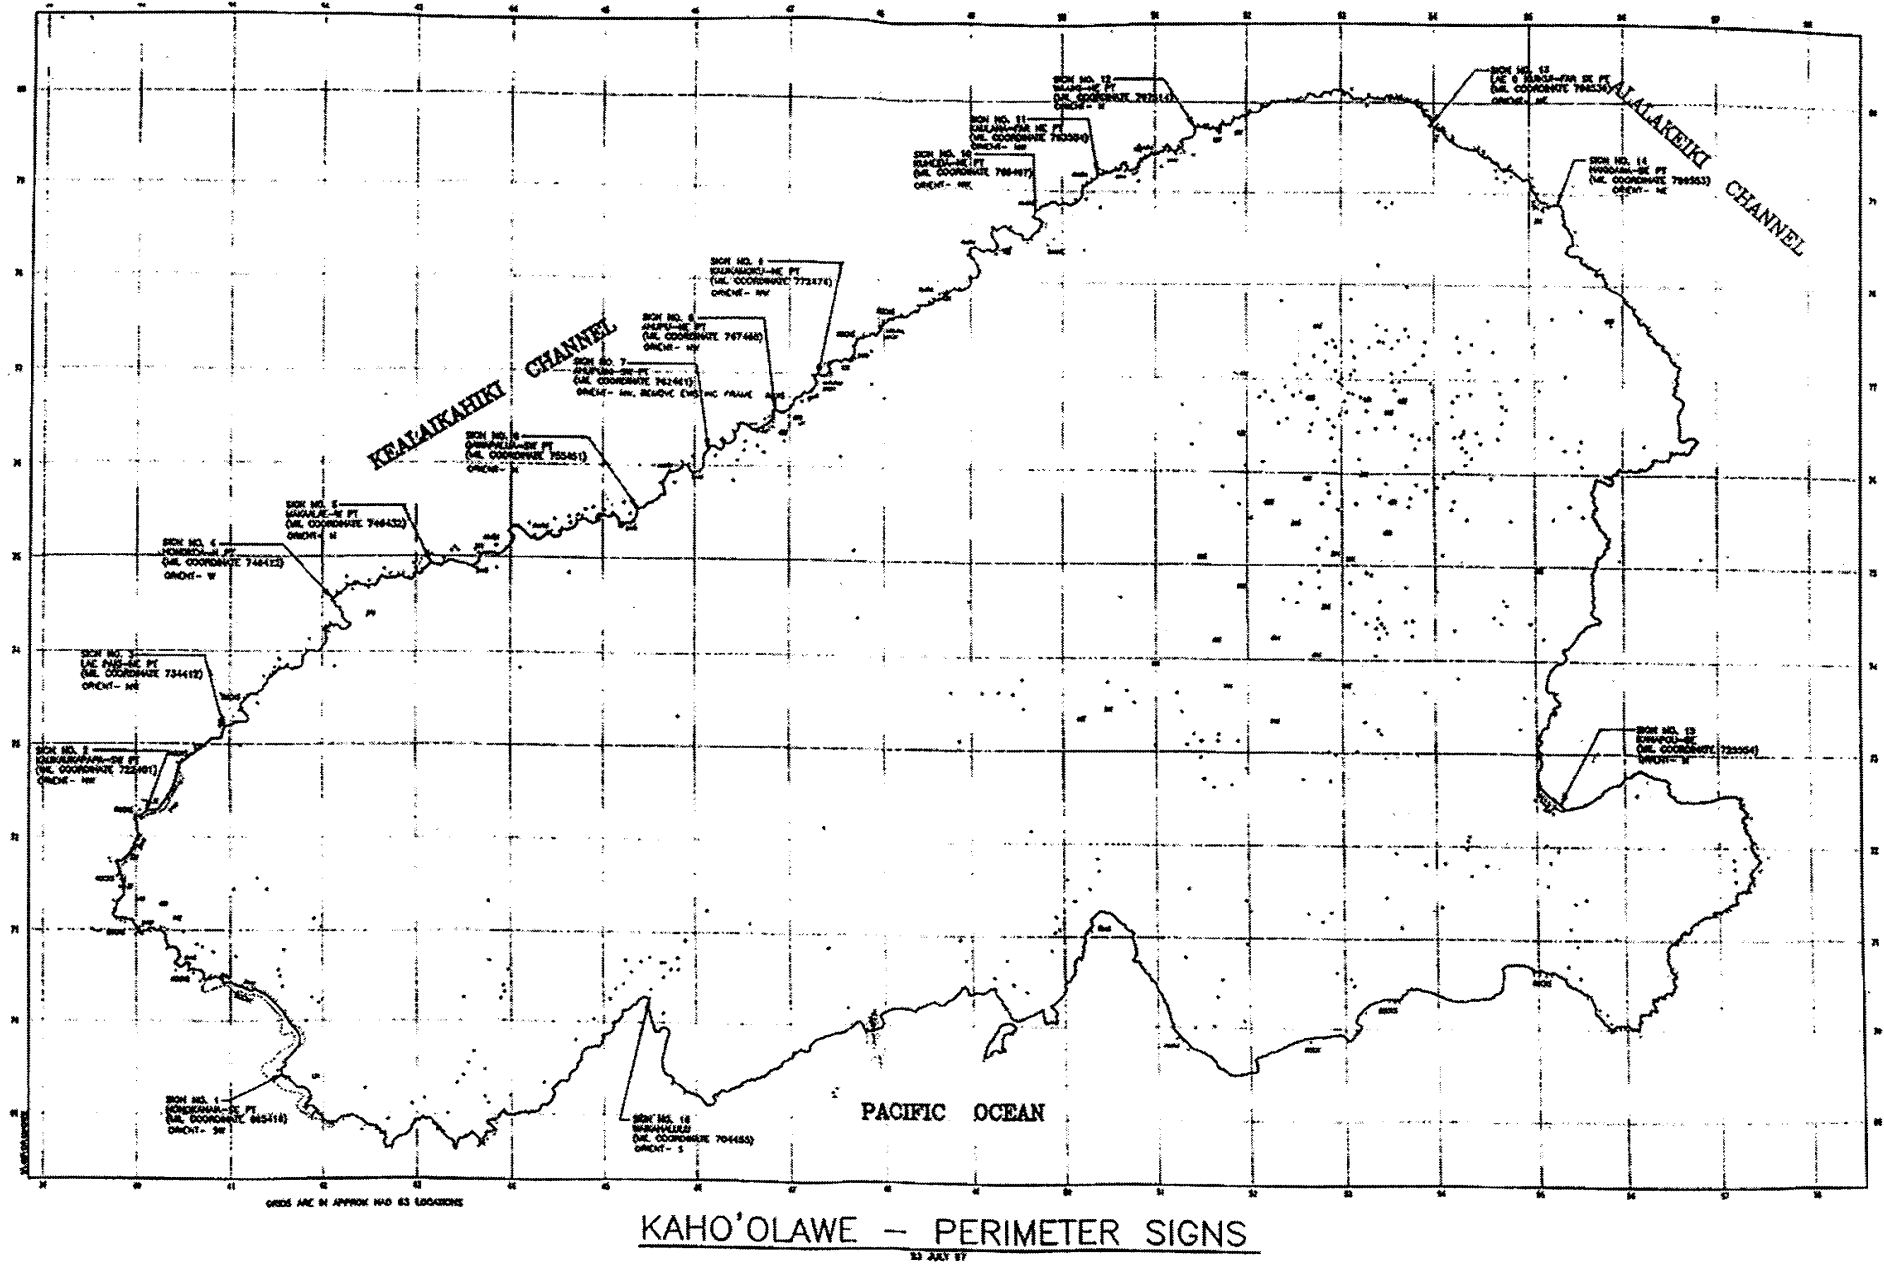

Figure 13: Coastal Warning Signs

## 10.3 Area Specific Engineering Controls

Area-specific Engineering Controls were installed around the perimeter of each clearance boundary to delineate the clearance boundary and provide in-the-field warnings of the different restrictions associated with the different UXO clearance levels. Two different polymer tubes were used to differentiate the three different clearance levels on the island. For each clearance level completed, the type and usage of the different Engineering Controls are listed below.

### 10.3.1 Tier Two Engineering Controls

The Tier Two UXO-cleared areas, shown on the various Clearance Maps of the Area Specific After Action Reports were designated as one of the following types:

- Type 1 Cultural Centers/Overnight Camp Sites as approved in Section 11.c. (4)(a) of the Explosive Safety Submission;
- Type 2B Frequent Transit Areas (Trails) as approved in Section 11.c. (4)(c) of the Explosive Safety Submission; or
- Type 2C Restoration Activities Areas as approved in Section 11.c. (4)(d) of the Explosive Safety Submission.

The corresponding boundary marker for the depth of clearance and permitted use for UXO Tier Two-cleared areas is a Type 2C, Restoration Area Boundary Marker, per Section 11.c.(4)(d) of the Explosive Safety Submission. An example of this type of Engineering Control is depicted in Figure 14. Drawings and intended use of these marker types have been reviewed by the State with no objections.

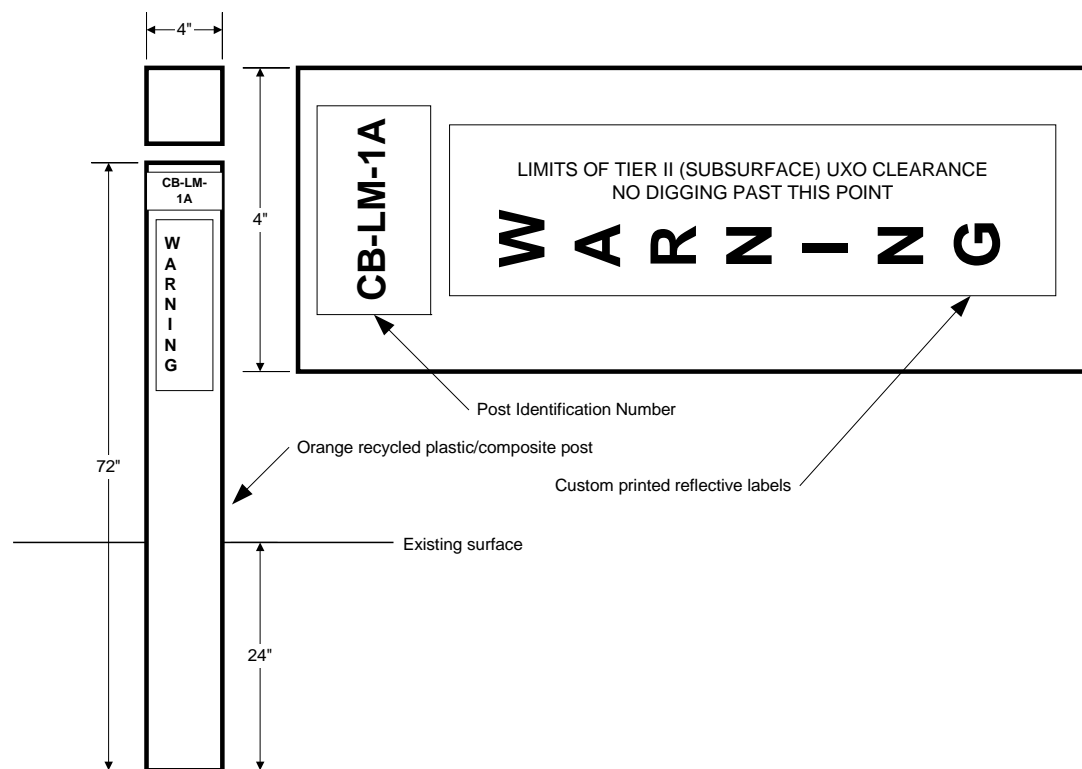

Figure 14. Typical Warning Signs for Tier Two Area

Appropriate boundary markers were established along the perimeters of the Tier Two UXO-cleared portions of Kaho`olawe that correspond to a change in UXO clearance from Tier Two to Tier One and are recorded on the Clearance Maps. The Clearance Maps indicate the planned installation locations of the Engineering Controls. Record drawings were not available for most of the Area Specific After Action Reports due to insufficient time to complete the necessary field surveys. Figure 15 shows a field application of Tier Two Engineering Controls used to delineate a Tier Two UXO-Cleared area.

**Figure 15: Tier Two Engineering Controls delineating Rocky Road**

## 10.4 Tier One Engineering Controls

The Tier One UXO-cleared areas, as depicted on the Clearance Maps, are designated as Type 3 Open Lands as approved in Section 11.c. (4)(e) of the Explosive Safety Submission. Type 3 areas are either bounded or encompassed by other use areas and are delineated by the other use area's boundary markers.

The Tier One UXO-cleared areas located within the Tier Two UXO-cleared areas as shown on the Clearance Maps are designated as Type 1 Exception Areas: Surface Cleared Exception Areas as approved in Section 11.c. (4)(g) of the Explosive Safety Submission. These areas were not subsurface cleared to the Tier Two UXO Clearance standard due to terrain inaccessibility by geophysical personnel and equipment or the presence of existing structures, , or insufficient time to complete the necessary anomaly excavations. The corresponding boundary marker for the depth of clearance and permitted use is also a Type 2C, Restoration Area Boundary Marker, per Section 11.c. (4)(d) of the Explosive Safety Submission, with the exception that the warning labels are facing toward the Tier Two UXO-cleared areas. The

wording for the boundary marker's label has been modified from the description in the ESS. The wording was changed from "Limits of Revegetation Area" to "Limits of Subsurface UXO Clearance." Drawings and intended use of these marker types have been reviewed by the State with no objections.

Engineering Controls were installed at the clearance boundary locations for each exception area as indicated on the Clearance Maps. As-Built Survey drawings are not available for most of the Area-Specific After Action Reports due to insufficient time to complete the necessary field surveys. Record drawings were produced based upon the planned installation locations. Figure 16 shows an example of engineering controls delineating a Tier One UXO-Cleared gully within a Tier Two UXO-Cleared area.

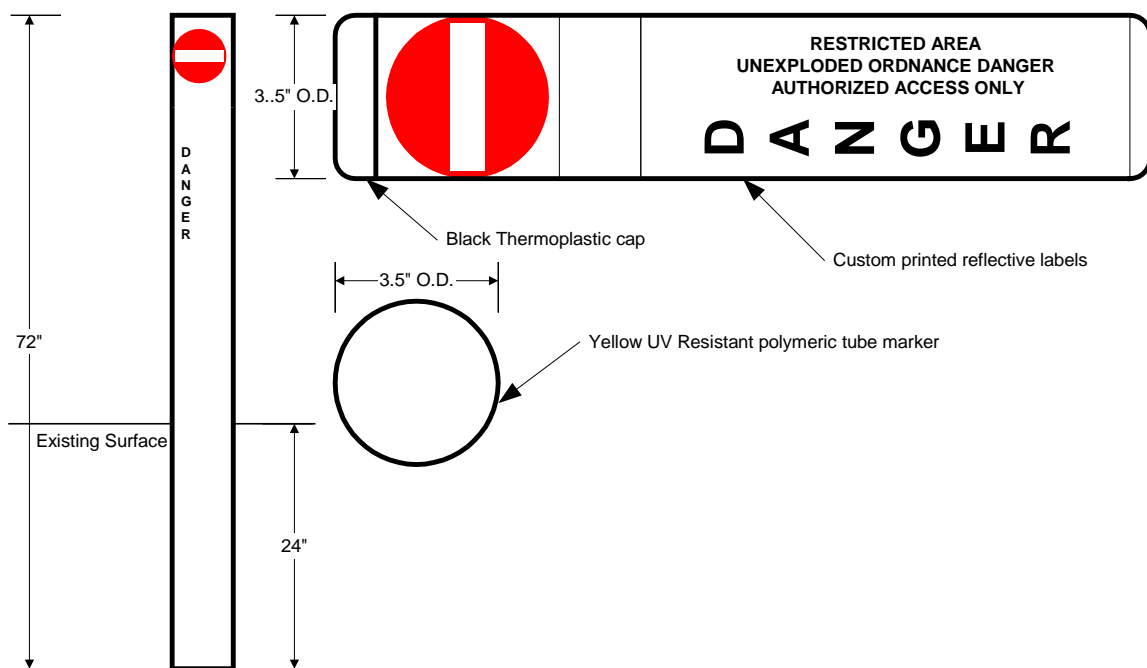

**Figure 16: Engineering Controls Delineating a Tier One UXO-Cleared Gully**

## 10.5 Uncleared Engineering Controls

The uncleared areas, located within Tier One UXO-cleared areas, depicted on the Clearance Maps, are designated as Type 2 Exception Areas: Uncleared Exception Areas as approved in Section 11.c.(4)(h) of the Explosive Safety Submission. These areas were not surface cleared to the Tier One UXO Clearance standard due to terrain inaccessibility by the UXO Surface Sweep Teams. The corresponding boundary marker for these areas is a Type 4, Special Management Area Boundary Marker, per Section 11.c. (4)(f) of the Explosive Safety

Submission, with the exception that the warning labels are facing toward the UXO cleared areas. An example of the boundary marker is illustrated in Figure 17, as described in the Explosive Safety Submission. Drawings and intended use of these marker types have been reviewed by the State with no objections.

Engineering Controls were installed at the clearance boundary locations for each uncleared exception area as indicated on the Clearance Maps. As-Built Survey drawings are not available for most of the Area-Specific After Action Reports due to insufficient time to complete the necessary field surveys. Record drawings were produced based upon the planned installation locations.

**Figure 17: Typical Warning Signs for Uncleared Areas**

Table 16 summarizes the various boundary markers, recommended land use restrictions, and UXO clearance standards used in this report.

**Table 16: Boundary Marker and Land Use Restriction Summary**

Designated Use Areas	Intended Land Use	Removal Depth	Allowed Land Use and Restrictions	Boundary Markers	Access Guide Requirements
1	Cultural centers and overnight camping	4 feet	Intrusive activities to 12 inches permitted	Type 1	None Required
2	Frequent transit areas (roads, helicopter landing zones)	4 feet	Public access, vehicular traffic, road maintenance activities permitted	Type 2A	KIRC or stewardship-organization guide
	Frequent transit areas (trails)	1 foot	Public access, no intrusive activities, surface raking less than 3 inches deep, surface rock gathering authorized	Type 2B	KIRC or stewardship-organization guide
	Restoration area	4 feet	Intrusive activities to 12 inches permitted	Type 2C	KIRC or stewardship-organization guide
3	Unspecified/ undesignated restoration areas, undeveloped coastal corridors, and open lands	Surface only	Restricted use, no intrusive activities	None*	Limited access EOD/UXO escort only
4	Special management areas	No clearance	Area remains hazardous with restricted access and no intrusive activities	Type 4	Restricted access EOD/UXO escort only
Type 1 Exception Area	Unspecified/ undesignated restoration areas, undeveloped coastal corridors and open lands	Surface only	Restricted use, no intrusive activities	Type 2C	Limited access EOD/UXO escort only
Type 2 Exception Area	None	No clearance	Area remains hazardous with restricted access and no intrusive activities	Type 4	Restricted access EOD/UXO escort only

Note: In accordance with Explosive Safety Submission – Amendment 1

## 10.6 Engineering Controls Location Survey

The locations for Engineering Controls post were predetermined to create a boundary that included the areas of interest that the Engineering Controls were providing notice.

Predetermined Engineering Controls post locations were surveyed and marked in the field with orange plastic hubs prior to installation. Installation teams then installed the appropriate Engineering Control post next to the predetermined survey pin. In some areas, installation teams were unable to install the Engineering Control post in the immediate vicinity of the surveyed hub due to rock outcroppings, archaeological sites or other interfering features. The Engineering Control posts were then installed as close as possible, as conditions permitted. The initial plan was to conduct a post-installation survey to update the actual Engineering Control post locations, but insufficient time remained on the project to perform all necessary surveys. The following work areas were surveyed and contain As-Built Engineering Controls drawings:

- Lua Makika
- Kanapou
- Kalapakea
- Kealaikahiki
- Hakioawa

All other work areas include Clearance Maps with the pre-installation survey hub locations only and have not been adjusted for the actual Engineering Control post installation locations.

---

## Section 11 Recurring Review Schedule

---

A separate Procedural Agreement regarding the means for regular internal clearance and removal of Newly Discovered, Previously Undetected Ordnance was signed by the Navy, the Kaho`olawe Island Reserve Commission, and the State of Hawaii. The agreement was recorded with the State of Hawaii Bureau of Conveyances as Document No. 2003-250978 on November 14, 2003.

In summary, this agreement provides that the Navy shall conduct regular interval clearance and removal of newly discovered, previously undetected ordnance on Kaho`olawe. The Navy shall respond to the State of Hawaii's request either as a prompt response or deferred response. A prompt response is initiated when ordnance has been found within areas in which human access occurs regularly and a prompt response to the ordnance is necessary to ensure human safety. A deferred response is initiated when Commander Navy Region Hawaii, in consultation with the State of Hawaii, determines that a sufficient number and types of ordnance have been located to warrant the mobilization of an three- or four-member ordnance response team to Kaho`olawe for a 5-day level of effort.

A copy of this agreement is provided in Supplement H.

## Section 12 ESS Deviations

The following is a list of general deviations or additions to the Explosive Safety Submission. Less significant, site specific deviations or additions were included in each Work Area Specific After Action Report.

**Table 17: ESS Deviations and Addition**

Change No.	Change Summary	Reason
1	Thermal Processing Unit (TPU) Explosive Safety Site Submission	TPU location not determined at the time of the ESS. Site submission submitted per PACDIV letter 11000 Ser ROK/733 of March 27, 2002 approving explosive safety stand-off distance and siting.
2	TPU Operating Temperature	Change in operating temperature for TPU from 1000F to 650F per PACDIV letter 11000 ROK/0029 of March 17, 2003. Temperature reduction increased productivity and reduced wear on TPU, See Section 3.3.1.1.
3	Second Open Detonation Area	Addition of a second Open Detonation area per PACDIV letter 11000.31 Ser PLN215/2469 of October 3, 2002. Second Open Detonation location allowed the concurrent operations of the TPU and open detonation. The location of the first Open Detonation Area prevented the concurrent operation of open detonation and thermal treatment at the TPU.
4	Risk Reduction Process	Addition of Risk Reduction clearance process per PACDIV letter 8020 Ser OPS/1435 of July 21, 2003. Submitted to allow the Navy to reduce the future risk associated with areas that were to remain uncleared. See Section 5.4.1.
5	LOADS	Introduction of the LOADS system for mechanical demilitarization of UXO Remnants. No Site Safety Submission was necessary. Addition of LOADS increased productivity of demilitarization of UXO remnants. See Section 3.3.1.2.
6	Flexible Linear Charges	Introduction of flexible linear charges for the explosive demilitarization of UXO remnant material. No Site Safety Submission was necessary. Linear charges increased the productivity of demilitarization of UXO remnants. See Section 3.3.1.2.

Change No.	Change Summary	Reason
7	Visual 5X Procedure	Introduction of the Visual 5X procedure to certify UXO remnants “explosives-free” by a visual inspection methodology. Army Publication IOCP-385-1 of July 16, 1997 and NOSSA Message DTG 171301Z DEC 02, Subject: Explosive Mishaps Involving Munitions Residue. Added this procedure to reduce the volume of material requiring thermal treatment and increasing productivity. See Section 3.3.1.3.
8	Disposal of OE Scrap	The ESS stated that the current plans were to have Metal Scrap Vendors take custody of the clean metallic scrap on-island. This was changed to PUXB maintaining custody and shipping off-island to metal recycler on Oahu. No Site Safety Submission was necessary. Solicitation sfor scrap vendors were unable to locate a scrap vendor willing to take custody and transport material from island.
9	Change in Blow-in-Place Standoff Distance	Changes to reflect Revision 7 to NAVSEA OP5. No Site Safety Submission was necessary. Increased stand-off distances for BIP operations.
10	Engineering Control Post Wording	Minor changes in wording for final Engineering Control labels used in the field. No Site Safety Submission was necessary. No impact to operations.
11	Deletion of Monitoring and Enforcement Provision for Institutional Controls	Provisions described in the ESS for monitoring and enforcement of institutional controls were not carried forth in the long-term management agreements. No Site Safety Submission was necessary. Decision of the Navy.
12	Change in Estimated End State	Final clearance differed from those estimated in ESS. Additional clearances were accomplished from those estimated at the submission of the ESS. No Site Safety Submission was necessary. Increase production rates and clarification of project end date allowed more work to be accomplished that estimated in ESS.

## Section 13 Cost Summary

### 13.1 Program Cost

Naval Facilities Engineering Command Pacific Division awarded Contract N62742-95-D-1339 to Parsons-UXB Joint Venture in 1997 for a contract value of \$280 million. The objective of the contract was to provide clearance of unexploded ordnance and environmental restoration which will allow for the reasonable safe use of the identified priority areas in the Kaho`olawe Island Reserve. Included in the scope of work was a wide range of services and construction projects that not only included UXO clearance, but also:

- Multi-media environmental sampling and analysis
- Range control operations
- Boundary and topographical surveys
- Protection of historical sites, endangered species and natural resources
- Design, construction and maintenance of Government Furnished Equipment, Government Furnished Facilities, and the operations and maintenance of an on-island base camp
- Transportation of contractor and Government personnel to and from the island
- Prepare Environmental Evaluation/Cost Analysis (EE/CA) documentation and/or an Engineering Evaluation/Cost Trade-off Analysis
- Other services as directed by the Government

The contract type was a Cost Contract plus Award Fee. The Award Fee was determined by an Award Fee Determining Board consisting of Government contract and technical representatives. Work was controlled through a task order process where the Government specified and controlled incremental UXO clearance by specifying the nature and extent of each task order.

The final contract value was \$344 million. A cost summary of each task order awarded is presented in Supplement J.

### 13.2 Area Assessment Cost

The Area Assessment, as described in Section 5.1, was awarded in five separate task orders over the duration of the project. The following is a summary of the Area Assessment cost:

**Table 18: Area Assessment Cost**

	Amount
Area Assessment Average Cost per GMU	\$1,306.62
Total Area Assessment Cost	\$14,266,016.59

The Area Assessment cost analysis is presented in Supplement K. Area Assessment cost includes all labor to conduct the area assessment. Not included in this cost is transportation to the work site and project management and office support to process the Area Assessment data.

### 13.3 UXO Clearance Cost

UXO Clearance was awarded in four separate task orders over the duration of the project. The following is a summary of the UXO Clearance cost:

**Table 19: UXO Clearance Cost**

	<b>Amount</b>
Tier Two UXO Clearance Average Cost per GMU	\$23,694.29
Tier One UXO Clearance Average Cost per GMU	\$11,586.55
Risk Reduction Average Cost per GMU	\$6,377.79
<b>Total UXO Clearance Cost</b>	<b>\$135,342,000.30</b>

The UXO Clearance cost analysis is presented in Supplement L. UXO Clearance cost includes all labor and field materials to conduct UXO clearance. Not included in this cost is transportation to the work site, thermal treatment of UXO remnants, off-island shipment of OE scrap, capital equipment (excavators, backhoes, trucks, geophysical detectors), project management, office and administrative support.

UXO Summary  
Tier One and Tier Two UXO-Cleared Areas

Work Area	GMU	Barcode ID	UTMX	UTMY	Depth (Inches)	UXO Type	UXO Nomenclature
Base Camp	74192699	15261	741995.46	2269950.80	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Base Camp	74192699	15262	741998.77	2269943.60	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	15264	741997.95	2269944.30	0	Projectile	U.S. PROJECTILE, 3-IN, AA, MK 27 (HE)
Base Camp	74192699	15424	741900.67	2269902.40	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	40607	741943.00	2269945.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	8466	741954.29	2269963.00	1	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Base Camp	74192699	8458	741985.87	2269971.20	2	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	8464	741976.11	2269952.20	2	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	8453	741990.76	2269942.00	3	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	8454	741985.94	2269958.60	3	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	8470	741956.92	2269940.80	3	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	8452	741963.94	2269925.30	4	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	8456	741992.13	2269969.20	4	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	8465	741962.62	2269963.10	4	Projectile	U.S. PROJECTILE, 5-IN, APHE, MK 32
Base Camp	74192699	8471	741935.20	2269936.00	6	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	8473	741921.25	2269952.10	6	Projectile	U.S. PROJECTILE, 8-IN, HC, MK 25
Base Camp	74192699	14393	741995.26	2269902.40	6	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Base Camp	74192699	14392	741983.09	2269960.70	12	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Base Camp	74192699	8461	741991.46	2269986.20	36	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Base Camp	74192699	10240	741900.54	2269900.20	0	Propellant	PROPELLANT
Base Camp	74192699	10313	741900.56	2269900.40	0	Propellant	PROPELLANT
Base Camp	74192699	10454	741900.02	2269900.00	0	Propellant	MOTOR, ROCKET (UNKNOWN MK)
Base Camp	74192699	10056	741915.00	2269905.00	0	Pyrotechnics	SIGNAL, DRIFT, AN-MK4, AN-MK5, AND AN-MK6
Base Camp	74192699	10450	741900.92	2269900.00	0	Pyrotechnics	U.S. SIMULATOR, HAND GRENADE, M116
Base Camp	74192699	10058	741920.11	2269909.00	0	Rocket	ROCKET, 6.5-IN, ANTI-TANK AIRCRAFT, MK 2 (ATAR)
Base Camp	74192699	10314	741900.02	2269900.00	0	Rocket	U.S. WARHEAD, ROCKET, 2.75-IN, FRAG, MK 1
Base Camp	74192699	8448	741903.04	2269900.70	0	Small Arms	SMALL ARMS
Base Camp	74192699	8664	741903.61	2269947.80	0	Small Arms	SMALL ARMS

UXO Summary  
Tier One and Tier Two UXO-Cleared Areas

Work Area	GMU	Barcode ID	UTMX	UTMY	Depth (Inches)	UXO Type	UXO Nomenclature
Honokoa	74262704	20634	742612.00	2270485.00	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Honokoa	74262704	20636	742626.00	2270413.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20637	742640.00	2270488.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20638	742638.00	2270489.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20639	742619.00	2270473.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20640	742639.00	2270417.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20641	742601.00	2270454.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20645	742696.00	2270412.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20646	742662.00	2270494.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20647	742673.00	2270413.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20648	742695.00	2270446.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20649	742678.00	2270426.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20650	742684.00	2270425.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262704	20651	742687.00	2270446.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24403	742651.00	2270551.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Honokoa	74262705	24404	742651.00	2270551.00	0	OE Component	BOOSTER
Honokoa	74262705	24405	742646.00	2270548.00	0	OE Component	U.S. FUZE, PROJECTILE, AD, MK 43, MK 54, MK 55, AND MK 89
Honokoa	74262705	24410	742616.00	2270597.00	0	OE Component	U.S. FUZE, PROJECTILE, BD, MK 19, MK 20, MK 21, MK 28, MK 48, & MK 64
Honokoa	74262705	24414	742640.00	2270522.00	0	OE Component	U.S. FUZE, PROJECTILE, AD, MK 43, MK 54, MK 55, AND MK 89
Honokoa	74262705	24427	742682.00	2270547.00	0	OE Component	U.S. FUZE, PROJECTILE, PD, MK 27
Honokoa	74262705	24428	742615.35	2270506.30	0	OE Component	U.S. FUZE, PROJECTILE, BD, MK 19, MK 20, MK 21, MK 28, MK 48, & MK 64
Honokoa	74262705	24406	742600.02	2270540.00	0	Projectile	U.S. PROJECTILE, 3-IN, AA, MK 27 (HE)
Honokoa	74262705	24407	742661.00	2270536.00	0	Projectile	U.S. PROJECTILE, 3-IN, AA, MK 27 (HE)
Honokoa	74262705	24408	742684.00	2270534.00	0	Projectile	U.S. PROJECTILE, 3-IN, APHE, MK 29
Honokoa	74262705	24411	742677.00	2270554.00	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Honokoa	74262705	24412	742637.00	2270539.00	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Honokoa	74262705	24413	742626.00	2270536.00	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Honokoa	74262705	24415	742601.00	2270505.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24416	742683.00	2270582.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24417	742601.00	2270599.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24418	742626.00	2270540.00	0	Projectile	U.S. PROJECTILE, 16-IN, HC, MK 13 & MK 14
Honokoa	74262705	24419	742623.00	2270517.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24420	742601.00	2270567.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24421	742601.00	2270599.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24422	742603.00	2270527.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24423	742602.00	2270523.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24424	742650.00	2270505.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24425	742602.00	2270513.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	24426	742600.02	2270515.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	28826	742610.00	2270590.00	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Honokoa	74262705	28827	742637.00	2270542.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262705	28828	742678.00	2270581.00	0	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
Honokoa	74262706	28830	742635.00	2270660.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97

UXO Summary  
Tier One and Tier Two UXO-Cleared Areas

Work Area	GMU	Barcode ID	UTMX	UTMY	Depth (Inches)	UXO Type	UXO Nomenclature
North Coast	74682763	40160	746808.00	2276328.00	10	Bomb	U.S. BOMB, 3-LB, PRACTICE, MK 3, MK 4, MK 5, AN- MK 23, & MK 43
North Coast	74682763	40162	746839.00	2276310.00	10	Bomb	U.S. BOMB, 3-LB, PRACTICE, MK 3, MK 4, MK 5, AN- MK 23, & MK 43
North Coast	74682763	40161	746869.00	2276325.00	12	Bomb	U.S. BOMB, 3-LB, PRACTICE, MK 3, MK 4, MK 5, AN- MK 23, & MK 43
North Coast	74682763	40164	746843.00	2276385.00	12	Bomb	U.S. BOMB, 3-LB, PRACTICE, MK 3, MK 4, MK 5, AN- MK 23, & MK 43
North Coast	74682763	40165	746872.00	2276375.00	24	Projectile	U.S. PROJECTILE, 3-IN, AA, MK 27 (HE)
North Coast	74682763	40158	746837.29	2276384.20	36	Rocket	ROCKET, 4.5-IN, BARRAGE, MK 3
North Coast	74682764	40436	746801.00	2276401.00	4	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
North Coast	74682764	40433	746870.00	2276409.00	8	Projectile	U.S. PROJECTILE, 40-MM, HE, MK 1, MK 2, & MK 3
North Coast	74682764	40432	746834.00	2276405.00	48	Projectile	U.S. PROJECTILE, 5-IN, SMOKE-PUFF, MK 52
North Coast	74682764	40435	746867.00	2276404.00	48	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
North Coast	74682764	40437	746801.00	2276401.00	0	Rocket	U.S. WARHEAD, ROCKET, 2.75-IN, FRAG, MK 1
North Coast	74682764	40434	746870.00	2276409.00	8	Rocket	U.S. WARHEAD, ROCKET, 2.75-IN, FRAG, MK 1
North Coast	74682764	40431	746810.01	2276470.90	12	Rocket	WARHEAD, ROCKET, 7.2-IN, HE, MK 5
North Coast	74682764	40430	746812.94	2276471.50	14	Rocket	WARHEAD, ROCKET, 7.2-IN, HE, MK 5
North Coast	74682764	40429	746814.72	2276468.20	48	Rocket	U.S. WARHEAD, ROCKET, 5.0-IN, HE, MK 6
North Coast	74682765	30712	746883.13	2276567.90	0	Rocket	ROCKET, 4.5-IN, BARRAGE, MK 3
North Coast	74682766	40167	746838.00	2276605.00	6	Projectile	U.S. PROJECTILE, 3-IN, APHE, MK 29
Waikahalulu	74692719	41665	746999.99	2272000.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Waikahalulu	74692719	41662	746973.84	2271983.20	0	Bomb	U.S. BOMB, 250-LB, GPLD, MK 81
Waikahalulu	74692719	41661	746974.91	2271962.70	0	Mortar	U.S. PROJECTILE, 81-MM, HE, M374
Waikahalulu	74692719	41663	746999.99	2272000.00	0	Propellant	PROPELLANT
Waikahalulu	74692719	41660	746927.08	2271941.20	0	Pyrotechnics	PYROTECHNIC
Waikahalulu	74692719	41664	746999.99	2272000.00	0	Small Arms	SMALL ARMS
Naval Gun Fire Range	74692720	21490	746900.02	2272099.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Naval Gun Fire Range	74692720	21493	746959.00	2272019.00	0	Bomb	U.S. BOMB, 25-LB, PRACTICE, MK 76
Naval Gun Fire Range	74692720	21488	746948.57	2272095.30	0	Mortar	U.S. PROJECTILE, 60-MM, HE, M49
Naval Gun Fire Range	74692720	21486	746917.39	2272020.30	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Naval Gun Fire Range	74692720	21487	746969.07	2272090.80	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Naval Gun Fire Range	74692720	21489	746998.94	2272046.40	0	Projectile	U.S. CARTRIDGE, 40-MM, HE, M383, M384, & M677
Naval Gun Fire Range	74692720	21492	746900.02	2272099.00	0	Propellant	PROPELLANT
Naval Gun Fire Range	74692720	21491	746900.02	2272099.00	0	Small Arms	SMALL ARMS
Naval Gun Fire Range	74692721	25290	746999.00	2272199.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Naval Gun Fire Range	74692721	21485	746999.00	2272199.00	0	Bomb	U.S. BOMB, 25-LB, PRACTICE, MK 76
Naval Gun Fire Range	74692721	21483	746989.24	2272136.30	0	Mortar	U.S. PROJECTILE, 81-MM, HE, M374
Naval Gun Fire Range	74692721	21484	746900.02	2272100.00	0	OE Component	U.S. BOMB, SIGNAL CARTRIDGE, CXU-3/B, MK 4 & MK 5
Naval Gun Fire Range	74692722	21506	746945.61	2272260.70	0	OE Component	U.S. BOMB, IGNITER, WP, M23
Naval Gun Fire Range	74692722	21507	746946.10	2272261.40	0	OE Component	U.S. BOMB, IGNITER, WP, M23
Naval Gun Fire Range	74692722	21509	746985.30	2272292.90	0	OE Component	U.S. BOMB, IGNITER, WP, M23
Naval Gun Fire Range	74692722	21510	746987.94	2272208.80	0	OE Component	U.S. BOMB, IGNITER, MK 273
Naval Gun Fire Range	74692722	21511	746987.00	2272222.00	0	OE Component	FUZE, AD FOR U.S. FLARE, AIRCRAFT, PARACHUTE, MK 45
Naval Gun Fire Range	74692722	21501	746930.72	2272275.40	0	Projectile	U.S. CARTRIDGE, 40-MM, HE, M381, M386, M406, & M441

Data query completed 9/7/04  
Sorted by GMU

UXO Summary  
Tier One and Tier Two UXO-Cleared Areas

Work Area	GMU	Barcode ID	UTMX	UTMY	Depth (Inches)	UXO Type	UXO Nomenclature

UXO Summary  
Tier One and Tier Two UXO-Cleared Areas

Work Area	GMU	Barcode ID	UTMX	UTMY	Depth (Inches)	UXO Type	UXO Nomenclature
Naval Gun Fire Range	74752736	32184	747584.00	2273680.00	0	Projectile	CANADIAN PROJECTILE, 3-IN, HE, MK 33
Naval Gun Fire Range	74752736	32185	747584.00	2273680.00	0	Projectile	CANADIAN PROJECTILE, 3-IN, HE, MK 33
Naval Gun Fire Range	74752736	32190	747599.00	2273601.00	0	Propellant	PROPELLANT
Naval Gun Fire Range	74752736	32191	747599.00	2273601.00	0	Small Arms	SMALL ARMS
Naval Gun Fire Range	74752737	32272	747599.00	2273701.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Naval Gun Fire Range	74752737	32270	747525.00	2273761.00	0	Bomb	U.S. BOMB, 25-LB, PRACTICE, MK 76
Naval Gun Fire Range	74752737	32268	747560.19	2273741.70	0	OE Component	U.S. BOMB, IGNITER, WP, M23
Naval Gun Fire Range	74752737	32266	747519.25	2273781.70	0	Projectile	U.S. PROJECTILE, 5-IN/54, HE, MK 64
Naval Gun Fire Range	74752737	32267	747506.92	2273757.20	0	Projectile	U.S. CARTRIDGE, 106-MM, HEAT, M344
Naval Gun Fire Range	74752737	32269	747578.00	2273703.00	0	Projectile	U.S. PROJECTILE, 3-IN, HE, MK 31
Naval Gun Fire Range	74752737	32271	747589.00	2273777.00	0	Projectile	U.S. PROJECTILE, 3-IN, AA, MK 27 (HE)
Naval Gun Fire Range	74752738	32334	747543.09	2273884.80	0	Mortar	U.S. PROJECTILE, 81-MM, HE, M43
Naval Gun Fire Range	74752738	32335	747547.63	2273861.50	0	Mortar	U.S. PROJECTILE, 81-MM, HE, M43
Naval Gun Fire Range	74752738	32336	747594.37	2273891.10	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 52
Naval Gun Fire Range	74752738	32332	747516.00	2273816.00	0	Propellant	U.S. MOTOR, ROCKET, 5.0-IN, HE, MK 16, MK 71, & MK 81 (ZUNI)
Naval Gun Fire Range	74752738	32333	747516.00	2273816.00	0	Propellant	U.S. MOTOR, ROCKET, 5.0-IN, HE, MK 16, MK 71, & MK 81 (ZUNI)
Naval Gun Fire Range	74752739	32317	747599.00	2273901.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Naval Gun Fire Range	74752739	32315	747580.00	2273961.00	0	OE Component	U.S. FUZE, PROJECTILE, BD, MK 19, MK 20, MK 21, MK 28, MK 48, & MK 64
Naval Gun Fire Range	74752739	32318	747599.00	2273901.00	0	Propellant	PROPELLANT
Naval Gun Fire Range	74752739	32319	747599.00	2273901.00	0	Small Arms	SMALL ARMS
Naval Gun Fire Range	74752740	19090	747501.00	2274001.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Naval Gun Fire Range	74752740	19086	747541.02	2274033.20	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Naval Gun Fire Range	74752740	19089	747582.03	2274091.20	0	Projectile	U.S. PROJECTILE, 5-IN, HE, MK 35
Naval Gun Fire Range	74752740	19087	747597.48	2274063.20	0	Rocket	U.S. WARHEAD, ROCKET, 2.75-IN, HE-FRAG, M151
Naval Gun Fire Range	74752740	19088	747539.79	2274071.30	0	Rocket	U.S. WARHEAD, ROCKET, 2.75-IN, FLARE, M257 & M278
Naval Gun Fire Range	74752740	19091	747501.00	2274001.00	0	Small Arms	SMALL ARMS
Naval Gun Fire Range	74752741	19134	747503.00	2274197.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Naval Gun Fire Range	74752741	19129	747509.11	2274168.90	0	Mortar	U.S. PROJECTILE, 60-MM, TP, M50
Naval Gun Fire Range	74752741	19123	747531.04	2274133.70	0	OE Component	U.S. BOMB, IGNITER, WP, M23
Naval Gun Fire Range	74752741	19124	747514.51	2274199.00	0	OE Component	U.S. BOMB, IGNITER, WP, M23
Naval Gun Fire Range	74752741	19130	747517.46	2274120.00	0	Projectile	U.S. PROJECTILE, 5-IN, SMOKE-PUFF, MK 52
Naval Gun Fire Range	74752741	19125	747529.33	2274129.00	0	Rocket	U.S. WARHEAD, ROCKET, 5.0-IN, HE, MK 6
Naval Gun Fire Range	74752741	19128	747586.45	2274163.10	0	Rocket	U.S. WARHEAD, ROCKET, 2.75-IN, HE-FRAG, M151
Naval Gun Fire Range	74752741	19132	747586.51	2274169.70	0	Rocket	U.S. WARHEAD, ROCKET, 2.75-IN, HE-FRAG, M151
Naval Gun Fire Range	74752741	19133	747503.00	2274197.00	0	Small Arms	SMALL ARMS
Naval Gun Fire Range	74752742	19114	747501.00	2274201.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Naval Gun Fire Range	74752742	19113	747561.55	2274288.50	0	Bomb	U.S. BOMB, 25-LB, PRACTICE, MK 76
Naval Gun Fire Range	74752742	19109	747593.68	2274255.00	0	Mortar	U.S. PROJECTILE, 81-MM, HE, M374
Naval Gun Fire Range	74752742	19110	747563.84	2274239.60	0	Projectile	U.S. PROJECTILE, 5-IN, SMOKE-PUFF, MK 52
Naval Gun Fire Range	74752742	19115	747501.00	2274201.00	0	Small Arms	SMALL ARMS
Naval Gun Fire Range	74752743	19101	747501.00	2274301.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
Naval Gun Fire Range	74752743	19100	747586.08	2274399.20	0	Mortar	U.S. CARTRIDGE, 60-MM, ILLUMINATION, M83
Naval Gun Fire Range	74752743	19102	747501.00	2274301.00	0	Small Arms	SMALL ARMS
North Coast	74752770	31932	747599.00	2277099.00	0	20mm Projectile	U.S. PROJECTILE, 20-MM, HE, M97
